Seamless embedded VMS solution, straight out of the box. Unlimited scalability. No server needed.

This simple, seamless solution powered by Milestone Arcus™ software replaces traditional server and storage devices with a single IQeye on-camera video management system designed for simple stand-alone installations, remote recording applications, or for systems that require minimum network bandwidth utilization.

Easy to Install

The initial deployment is completed within minutes after connecting your IQeye cameras and requires little or no maintenance. Just plug and play.

Easy to Use

The intuitive, all-in-one user interface allows users to log in to operate their surveillance solution from a web browser. Users can view live video, search and export video evidence without any additional software installation required.

Easy to Maintain

No software installation or maintenance required on client PCs. Milestone Arcus updates are rolled out easily through firmware updates.

Unlimited Scalability

Manage remote sites via Milestone Interconnect™ and XProtect® corporate. Users can easily and seamlessly manage their system expansion across multiple sites.
