XProtect® VMS – Software House C-CURE 9000

Milestone Systems, the world leader in IP video management software, has partnered with Software House to develop a scalable, multi-site access control and alarm monitoring system.

The system is an integration of Milestone Advanced VMS with Tyco/Software House C-CURE 9000 Security and Event Management System access control. The integration gives central control over the entire system to system administrators at the main facility, while each local facility maintains control of its individual operation.

Whether the organization consists of a few facilities that are locally dispersed or many that span the globe, this solution scales as the company grows.

The C-CURE 9000 integration with XProtect® software allows users to view live and recorded video from XProtect from inside the C-CURE user interface, eliminating the need to use two different consoles.

**What can the integration do?**

- This integration is designed to use C-CURE 9000 as the head-end system, enabling operators to use the C-CURE 9000 user interface to view and manage XProtect® video related to C-CURE access control
- Send events from C-CURE 9000 into Milestone XProtect
- Receive events from Milestone XProtect video events (video motion detection) into C-CURE 9000

**To implement this integration, you need:**

- XProtect Corporate or Expert
- Milestone SDK v3.5b redistributable
- CCure 9000 integration installation package to unlock video access get the CC-9000 Milestone plugin
- CCure 9000 software/hardware system v2.3, v2.4, v2.5

All the administration and configuration of the integration is performed from the C-CURE Administration Workstation application.

**About the solution**

- Provides operators with a simple, unified interface to view video associated with access control events that enables them to control their site’s entire security system
- Simplifies operator training by using the C-CURE 9000 user interface to display alarm associated video
- View live and recorded video supporting PTZ control
- Creates a more efficient security operation by combining video and access control in one system
