PROGRAM

CSI Protect is a crime-fighting solutions company employing proven strategies that protect people and property. By utilizing cutting-edge forensic marking technology from SelectaDNA, CSI Protect helps substantially reduce crime and, if a crime is committed, provides law enforcement with a powerful scientific tool to irrefutably identify, then apprehend and prosecute criminals.

Each unit of the invisible forensic solution contains a universally unique synthetic DNA code that undeniably links a criminal, and items, to a specific crime scene – and provides an unbreakable chain of evidence in a court of law. The non-toxic technology greatly increases the probability of being arrested; thus, serving as a major deterrent to criminals from targeting a SelectaDNA protected business.

Proven to Reduce Crime by 40% to 86%

Technology Used in 30-plus Countries Over Ten Years

Criminal Tagging System

A powerful, proven device against burglary, robbery, theft and unauthorized access that prevents and solves crimes. Stealthily tags criminals with a forensically coded mist. Numerous activation modalities such as panic buttons, money clips, RFID, EAS and soon – facial recognition. Easily integrates with other security systems – such as burglar, intrusion, remote video monitoring and access control – for enhanced crime-fighting outcomes.

Marker Pen

A simple yet extremely effective method to prevent theft and fraudulent returns, as well as aid criminal investigations. Special non-reusable stickers provide enhanced results. Each unit marks up to 1,000 items.

The invisible forensic solution remains on skin for four to six weeks, clothing two to three months and hard surfaces five years or longer. Only visible via use of special frequency UV lights.

Property Marking Kits

Protects valuables from theft and burglary utilizing unique forensic codes and microdots. Greatly reduces likelihood of crime and allows law enforcement to quickly and accurately identify ownership of stolen or lost items.

Handheld Tagging Sprays

A high efficacy crime-fighting tool for law enforcement, and licensed security companies, to prevent and solve crimes. The Tagging Sprays forensically mark (up to 25 feet) criminals and their getaway vehicles, as well as stolen items.

Grease

Designed to protect outdoor items such as metal, copper and mobile equipment vulnerable to theft and vandalism. Excellent for deterring crime and enhancing outcomes of law enforcement investigations.

MetallicDNA

An extremely durable forensically coded lacquer, combined with microdots, helps prevent and solve crimes involving theft of copper, wiring and mobile equipment. It can be used in practically all types of weather conditions.

High Velocity Tagging System

Non-lethal forensic technology allows law enforcement, and licensed security companies, to mark (up to 125 feet) criminals with forensically coded pellets providing incontestable evidence that a person was at a specific crime scene.

Covert Spray System

Available to law enforcement and licensed security companies. A highly customizable and easy-to-install system that forensically mists unsuspecting criminals committing theft, burglary or trespassing. The reusable system can be used in cars, baby seats, and indoor and outdoor items.

Gel

The versatile forensic Gel helps irrefutably identify individuals (employees and non-employees) committing criminal acts – such as theft, burglary, vandalism and trespassing. Ideal for 'bait' operations.

Secure Asset Register

At no cost, clients register their forensically marked items in the secure online international database. If items are lost or stolen, certified law enforcement agencies can search the database to match forensic codes to return property to the rightful owners.
