squid

interconnected sites monitor / V1.1

SQUID

interconnected sites monitor

Squid is a Smart Client plugin that is used in environments that comprise Milestone XProtect corporate central site and many Milestone XProtect interconnected sites.

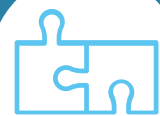

OVERVIEW

The main goal of Squid is to provide smart client users at Milestone Xprotect Corporate Central site with information about their interconnected sites. The collected information includes the sites name, IP address, status, last connection, last disconnection and a report generator to audit the interconnected sites changes.

FEATURES

- Central monitoring for all interconnected sites.
- Real time updates about the status of interconnected sites.
- Display each interconnected site IP address, name, status, last connection, last disconnection.
- Fully integrated inside Milestone XProtect Smart Client.
- Includes searching & filtering options.
- Report generation that includes: site name, site status: online, offline, server added, server removed, server renamed, time frame definition
- Enhance productivity of security staff.

COMPATIBILITY

Compatible with Milestone Xprotect Corporate 2016 and newer
