

Nevalabs Success Story

Turkish National Police Central Face Recognition System Project, 2018

Nevalabs outperformed global key players at formal 1:N face recognition tests from photos and cameras. After the successful test results, the Turkish National Police was started to use Corvo Identify Corporate central face recognition and alarm management software for homeland security. Corvo Identify's real-time alarm management and suspect investigation modules are used for the identification of the terrorists nationwide.

Nevalabs provides best-in-class face recognition solutions with the highest level of accuracy and the most advanced features in order to support the protection of citizens from risks like crime, terrorism, attacks on strategic sites, etc. Corvo Identify, with its cutting-edge technology, modular design, and scalable architecture, is the complete solution that fulfills the security needs.
