XProtect® VMS & Lenel OnGuard® XProtect® Access Integration

Milestone Systems, the global leader in IP video management software, has partnered with Lenel, a leading provider in advanced security systems, to integrate the Lenel OnGuard® Access System with the XProtect® video management system.

About the Integration

This integration is based on Milestone's XProtect Access interface and enables operators to display their access control events and alarms on the XProtect® Smart Client.

By coupling video and access control events, operators are able to view access events.

Customers will also benefit from more efficient processes, as operators can manage their organization's physical security from a single interface.

This integration supports the most recent version of Lenel with the most recent version of XProtect.

The most recent versions are listed on the Milestone Solution Finder website.

Operators are then able to export video associated with an alarm to any destination while recording new video.

Integrate XProtect video with access control:

- Provides a single user interface for video and access control management

- Simplify user work flow with a dedicated access control tab in conjunction with video control

What the integration offers

Operators can:

Display Lenel access control and alarms in a separate tab with associated video in the XProtect Smart Client.

Utilize standard XProtect video search, export and review functionality.

Use XProtect Map functions to display managed doors status on a map image as well as lock and unlock doors.

Add additional Milestone third party applications for intercom control, people counting, heat mapping, loitering and other video analytics.

Integration Requirements

To implement the Milestone Lenel XProtect Access integration, you need:

An XProtect system (2016 or higher), one XProtect®

Access base server license and one door license for each door to be managed.

Lenel OnGuard XProtect Access integration plugin installation.

Lenel Data Conduit and the Lenel OnGuard software/hardware system.

Note: Current compatibility per the Solution Finder Entry.

Integration Functionality

XProtect Rules engine support for supported Lenel alarms.

XProtect Smart Client Map support for Lenel door controllers.

This integration enables system users to view alarm events in real time in the XProtect Smart Client.

Please note that alarm acknowledgement only acknowledges "alarm copies" from the Lenel OnGuard system. Alarms still need to be acknowledged in Lenel OnGuard at this time.
