Milestone XProtect®
Alarm Matrix

The Milestone XProtect® Smart Client Alarm Matrix enables the users to get direct and real-time access to all Milestones alarms, by automatically displaying the alarms when they happen.

The Alarm Matrix will, when a new alarm is received, display the relevant cameras from the alarm in both a playback and a live display. Both the playback and the live view can independently be configured to display either source camera of the alarm, related cameras on the alarm or both.

The playback view will play the video in a loop starting from a pre-configured number of seconds (pre-alarm buffer) before the alarm and play for a configured number of seconds (loop interval). The Alarm Matrix is developed as a XProtect® Smart Client view item that can be dragged into a XProtect® Smart Client view.

Therefore, more than one Alarm Matrix view item can be displayed at the same time. When more than one Alarm Matrix is used at the same time, new alarms will be distributed between all active (currently shown) Alarm Matrix view items to enable the operator to view as many concurrent alarms as there are active Alarm Matrix view items.

Alarm Matrix
Key Features

⬇

Visualize multiple alarms simultaneously.

Highly customizable Alarm display enabling fast operation for alarm centers.

Alarm notifications by sound effects, flashing borders and floating windows.

Live and playback streams of camera(s) at the same view.

Related camera streams in alarm display.

Automatic switching between multiple alarms.

Configurable pre-alarm buffer and loop time interval.
