AXON

Axon Incident Manager Plugin

Integrating Milestone with the Axon Incident Management Platform

Milestone and Axon have joined forces to offer an exciting new platform to capture, manage, reconstruct, redact and share your data, video and images for a superior incident and case management experience. With the new plug-in, customers are able to upload content from Milestone XProtect, directly to the Axon platform.
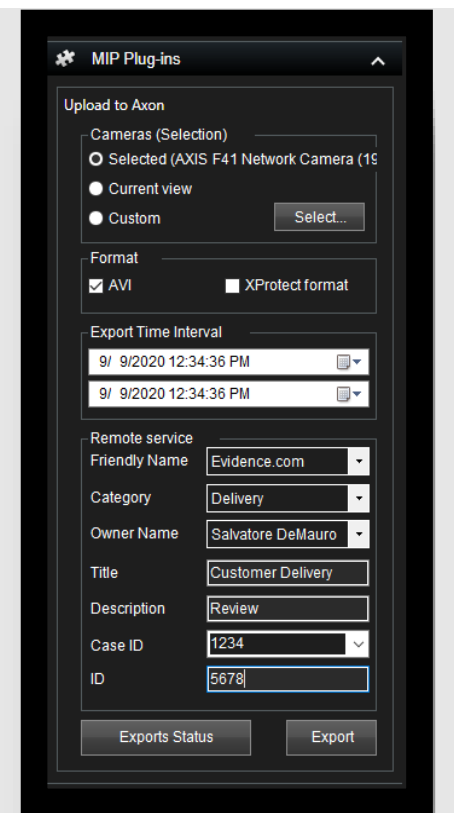

Key Features:

Upload Directly to the Axon Platform – The Milestone / Axon integration provides the ability to upload selected XProtect video assets directly to one or multiple instances of Evidence.com in the cloud. Once uploaded, you can playback, transcribe and share those assets with chosen stakeholders anywhere in the world.

Sensitive Data Redaction – Axon Redaction tools leverage AI to automatically redact any sensitive data before it is shared with other agencies or the public.

Metadata Synchronization – Label assets quickly and easily. Synchronize your Axon Evidence categories and Owner list with the XProtect client prior to uploading.

Case Creation & Upload – Upload assets from XProtect directly into the appropriate Evidence.com case. New Evidence case folders can be easily created inside the XProtect client interface.

Secure Auditing – Each asset uploaded to Evidence.com will have the XProtect and Evidence.com audit trails for complete chain of custody when an incident becomes evidence.

When incidents are captured in Milestone, and they need to be shared securely, quickly and efficiently, the Milestone/Axon plug-in achieves the process with industry-leading tools & technology.
