General description

Introduction

The Dynamic Stream Selection Plug-in provides the ability to determine the size of a camera view item and use the above-mentioned interface extension to send a message to the Smart Client to switch stream on the camera view item.

Solution overview

The Dynamic Stream Selection plug-in in the Smart Client monitors which camera view items are currently shown and whether size of the camera view items is changed.

If the camera within each camera view item does have two or more video streams, the plug-in determines whether two of the camera video streams have names containing string **High** and **Low**. The names are not case-sensitive.

For each such camera view item, if resolution size of the view item is larger than the resolution specified in the configuration, the plug-in will command the camera view item to use the stream with the name containing the string **High**. If it is smaller than the specified resolution, the plug-in will command the camera view item to use the stream with the name containing the string **Low**.

The Dynamic Stream Selection plug-in also works in case the camera view item is sent to **New Floating Window**. It switches the streams dynamically according to the camera view item size of the window.

Installation

Prerequisites

The Milestone Dynamic Stream Selection plug-in is only compatible with Milestone Advanced VMS products (XProtect® Corporate 2017 R2 and XProtect® Expert 2017 R2) or newer.

Plug-in installer

The Milestone Dynamic Stream Selection consists of one installation file supporting Windows 64-bit only:

- *DynamicStreamInstaller_x64.msi*

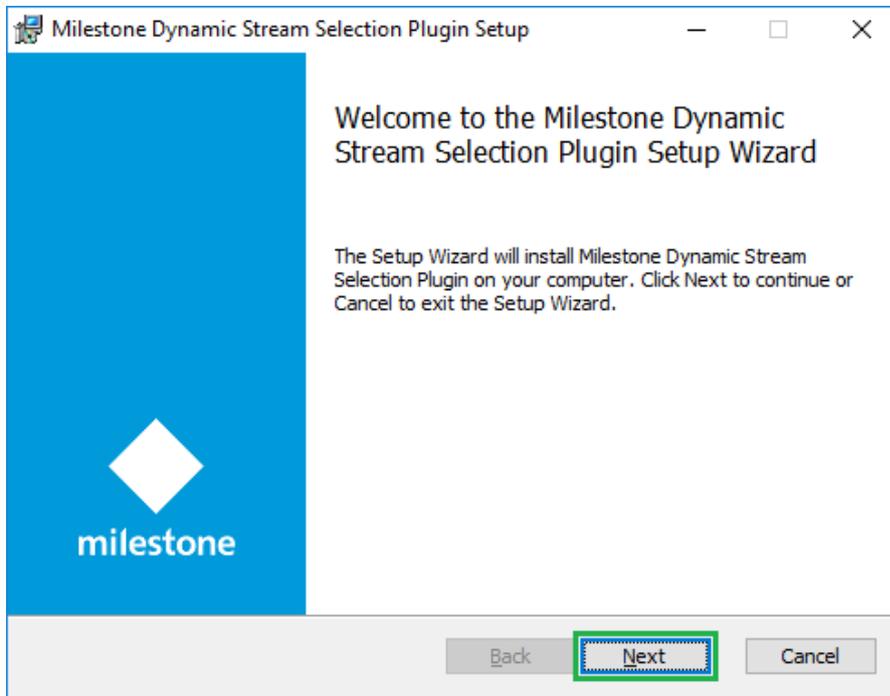

The Milestone Dynamic Stream Selection plug-in should be installed on the following computers:

- On the computer where the Milestone Smart Client is installed
- On the computer where the Milestone Management Client is installed

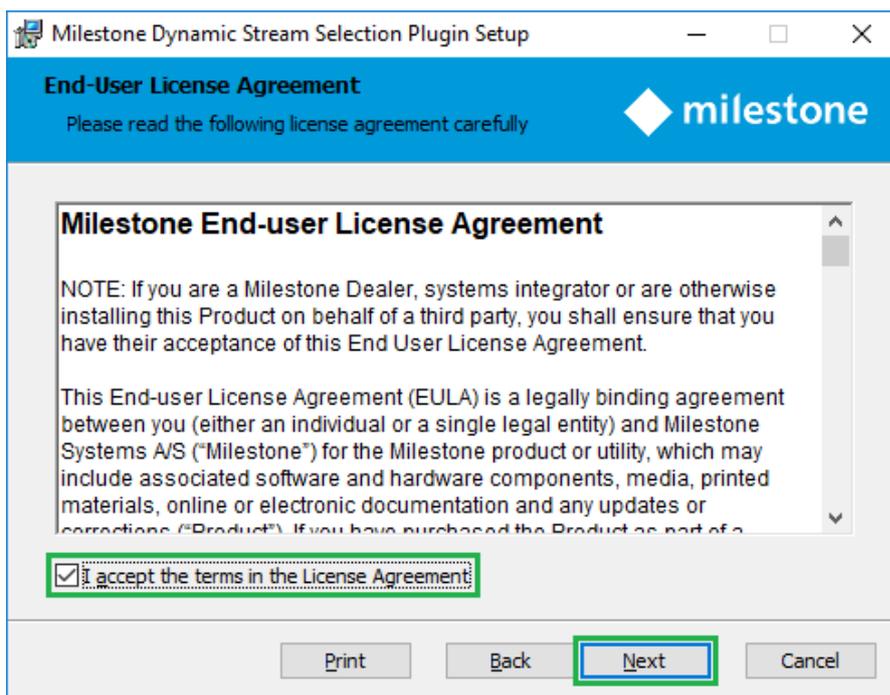

Installation steps

1. Start the installation by executing *DynamicStreamInstaller_x64.msi*.

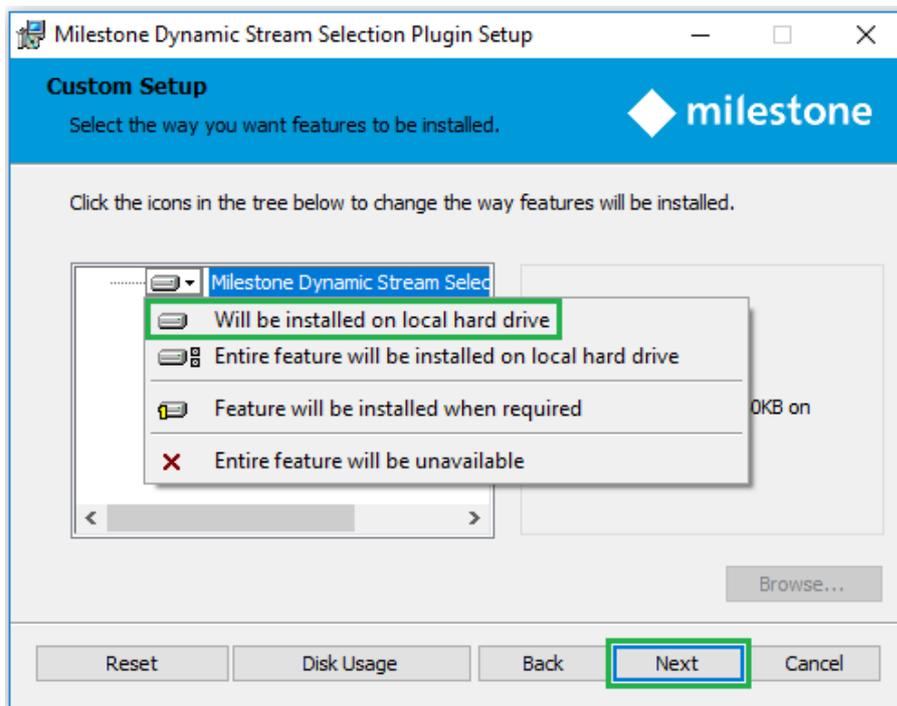

2. Click **Next**.

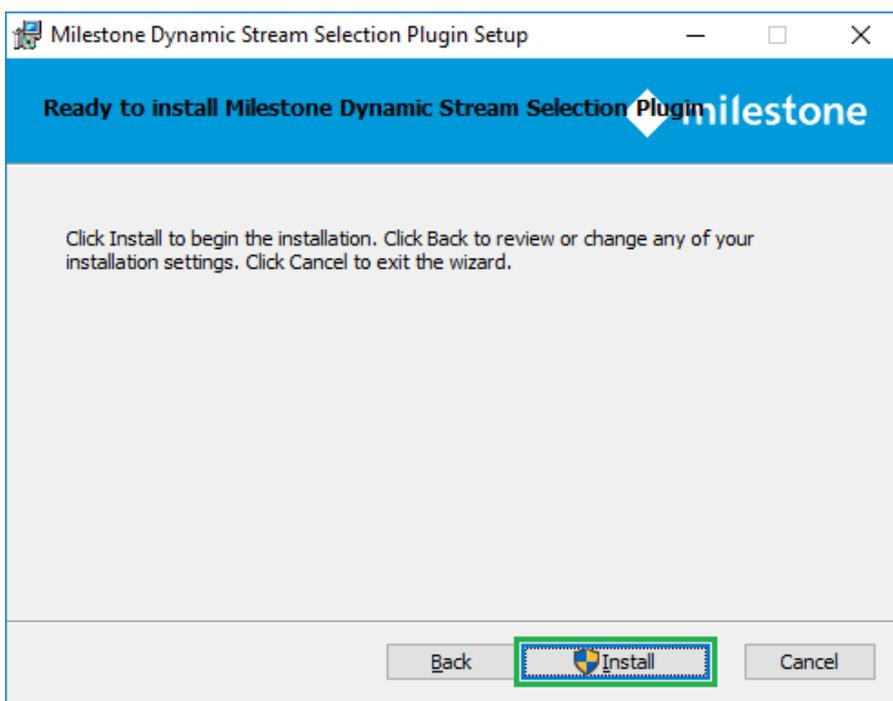

3. Read the license agreement carefully and select the **I accept the terms in the License Agreement** box. Click **Next**.

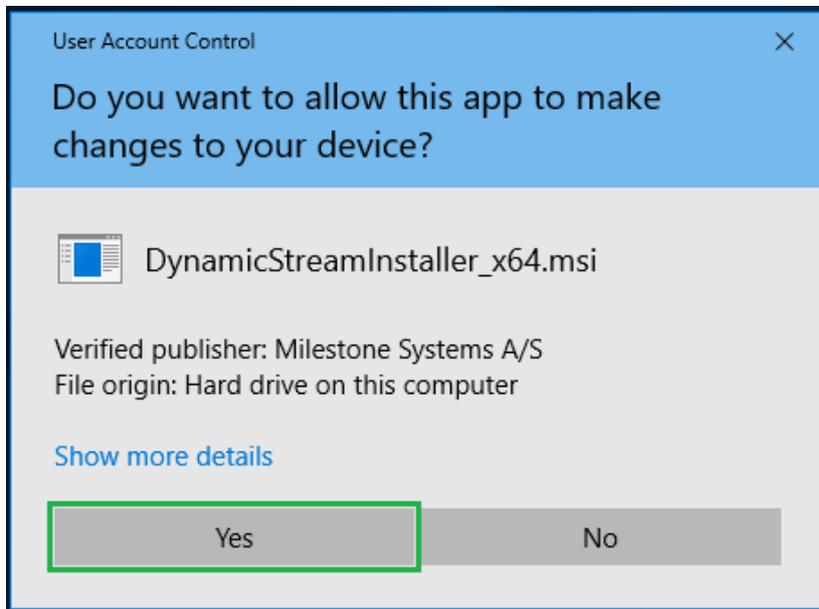

- 4. By default it will be selected option **Will be installed on local hard drive**, which is the correct one. Click **Next**.

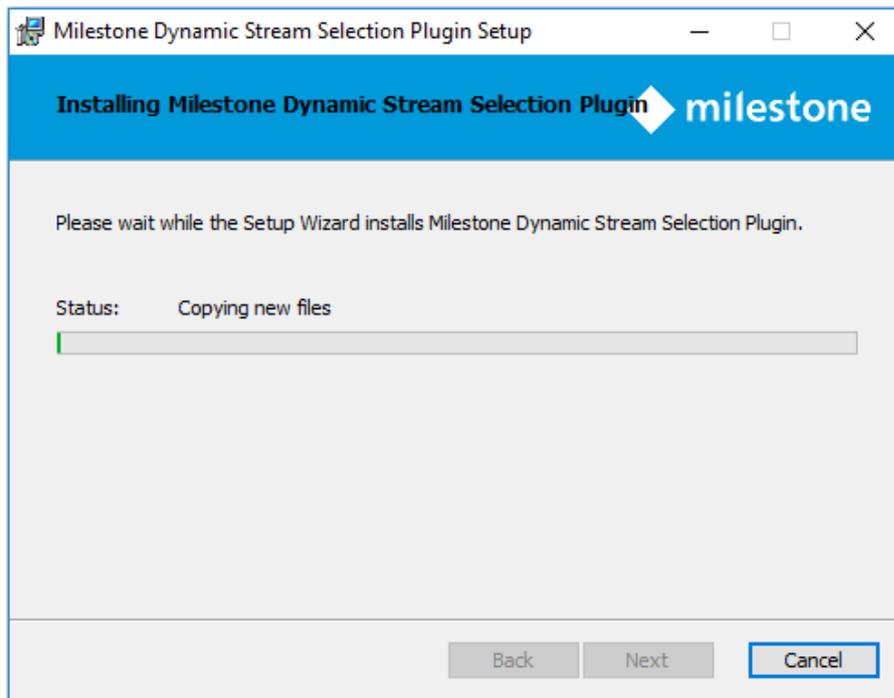

- 5. Click **Install**.

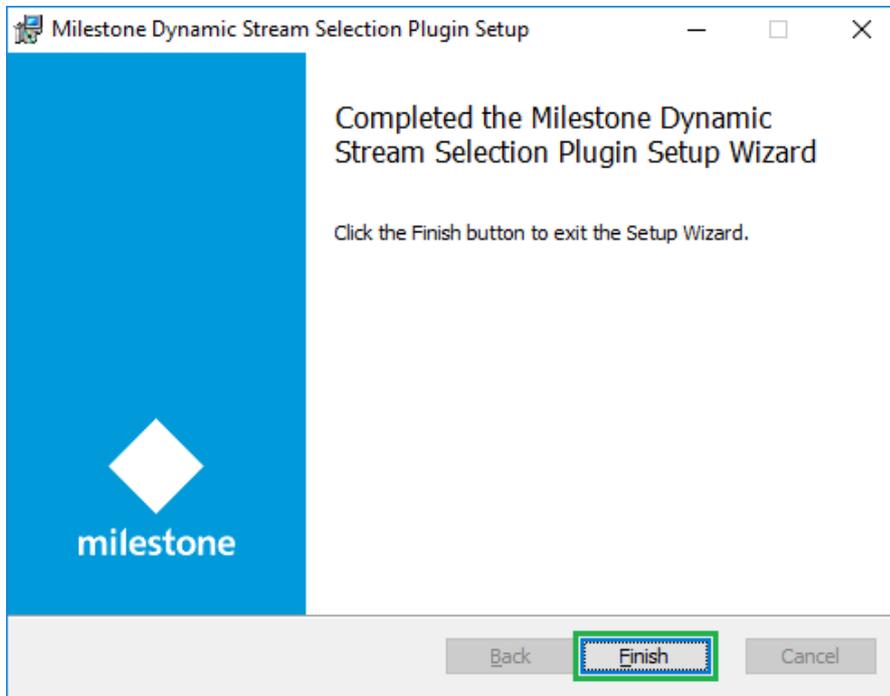

- Click **Yes**, in case the following message appears on the screen:

- The next steps are executed automatically.

8. Click **Finish**.

License

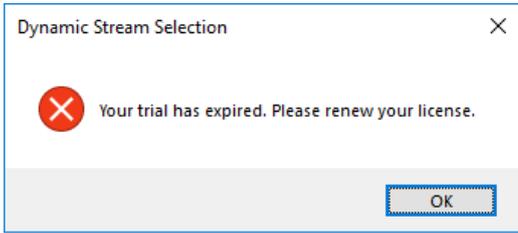

The solution has a build-in license check that is locked to the software license code (SLC) of the VMS installation of which it is part.

It automatically comes with a 30 days grace period which starts from the date the plug-in is installed. After the grace period expires, a permanent license is needed.

The permanent licenses are provided by the distributor. In order to generate a permanent license, the distributor must know the SLC of the VMS system where the solution has been installed. Collect the SLC and send it to the distributor, preferably via email.

When the permanent license is acquired, the XProtect VMS must be reactivated, either online or offline.

If license check fails, the Smart Client plug-ins will issue error messages and will have a reduced functionality.

The license information can also be checked in the Management Client > **Site Navigation** > **Basics** > **License Information** > **Installed Products** > **Dynamic Stream Selection**.

License Type	Activated	Changes without activation	In Grace Period	Grace Period Expired	Without License
Hardware Device	0	0 out of 0	2	0	0
Milestone Dynamic Stream Selection	0	N/A	1	0	0

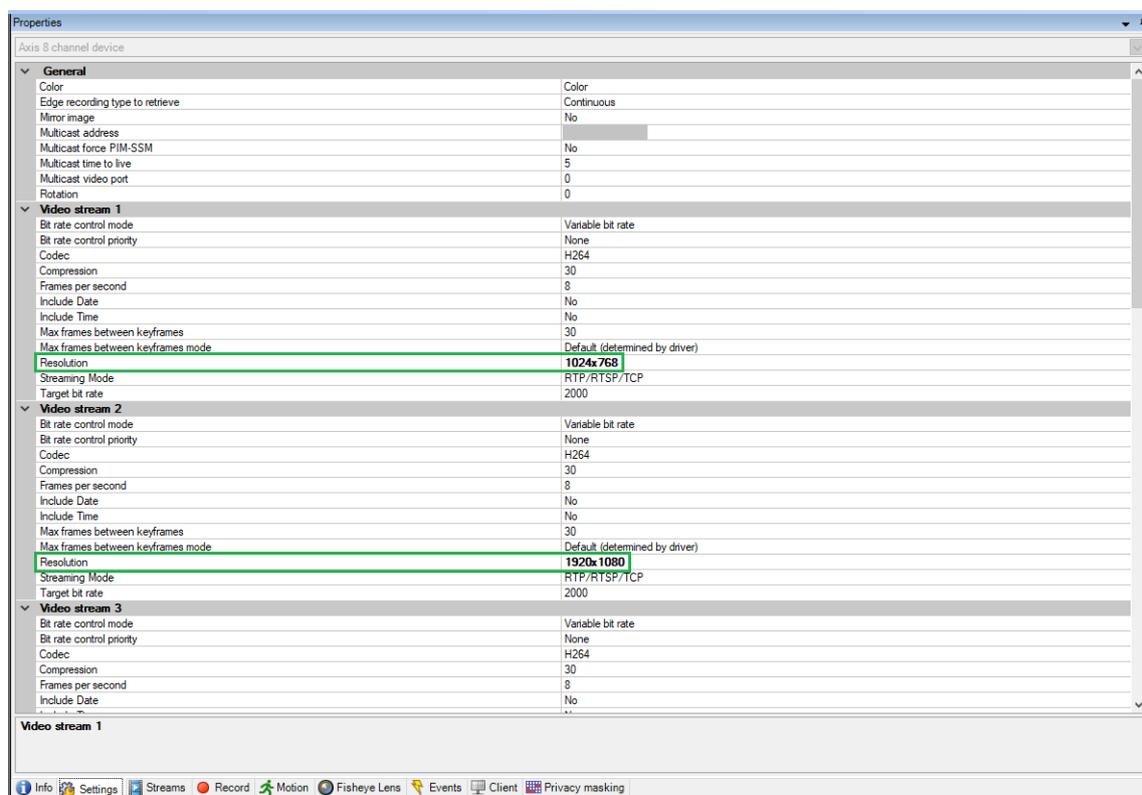

Configuration

Management Client

1. Open the Management Client > **Site Navigation** > **Devices** > **Cameras**.

2. Select specific camera and click on the **Settings** tab in the **Properties** window.
3. Configure low **Resolution** for **Video stream 1**, 1024x768 for example.
4. Configure high **Resolution** for **Video stream 2**, 1920x1080 for example.
5. **Save** the changes.

6. Click on the **Streams** tab.

Add two streams: first one with low resolution, name containing string **Low**, corresponding to **Video stream 1** from the **Settings** tab and second one with high resolution, name containing string **High**, corresponding to **Video stream 2** from the **Settings** tab.

For example:

Stream: **Video stream 1**

Name: **Low** Res Stream

Live Mode: Always

Default: Checked

Record: Checked if needed

Remote Recording: Checked by default

Stream: **Video stream 2**

Name: **High** Res Stream

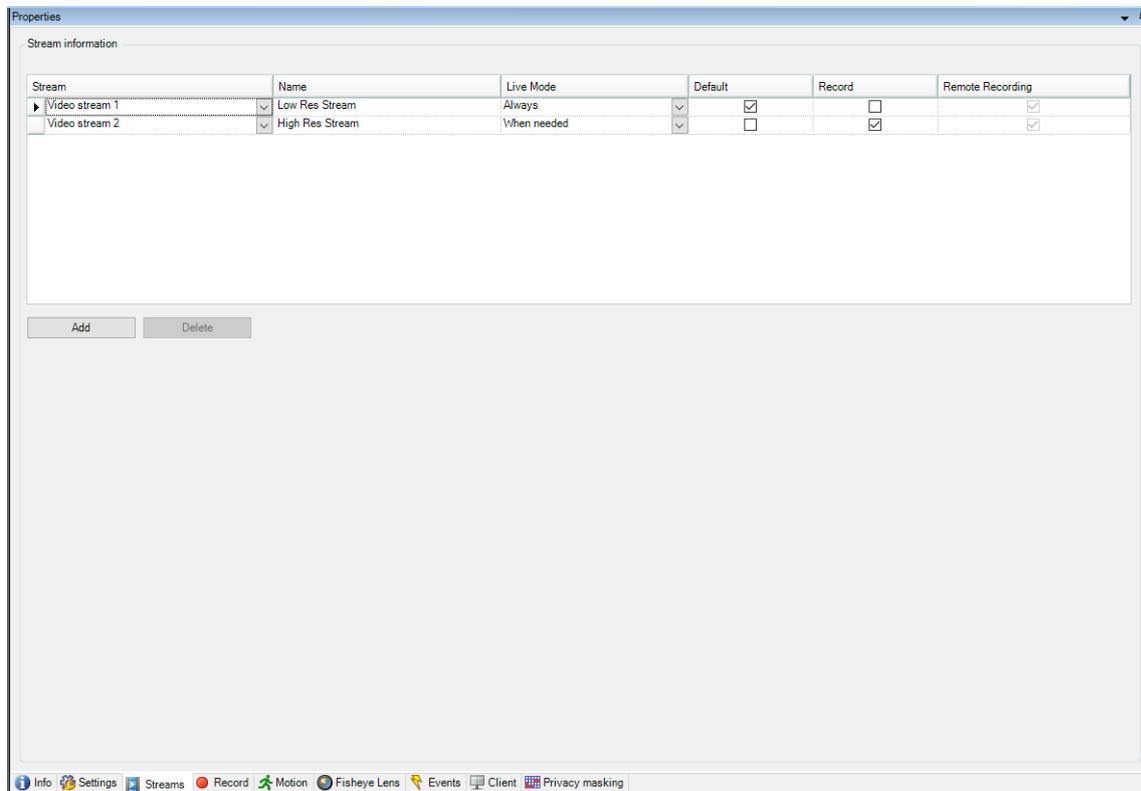

Live Mode: When needed

Default: Not Checked

Record: Checked if needed

Remote Recording: Checked by default

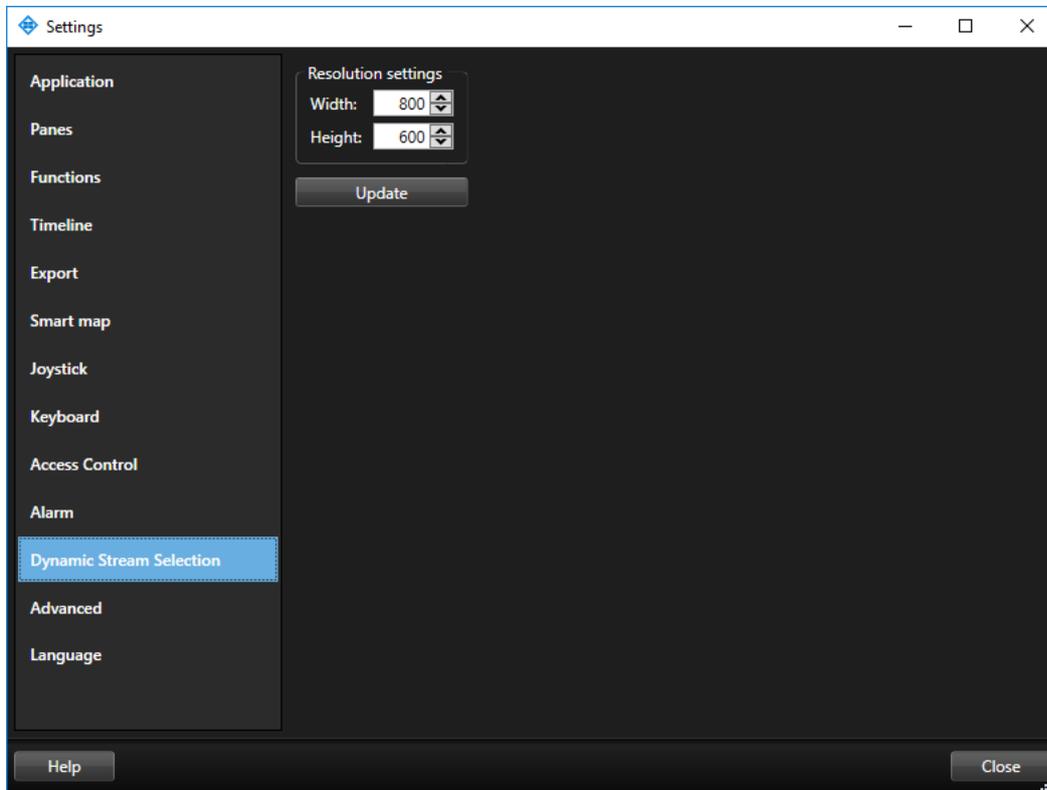

7. **Save** the changes.

Smart Client

1. Open Smart Client > **Settings** > **Dynamic Stream Selection**.

The default values for the **Resolution Settings** of the camera view item are **Width: 800** and **Height: 600**.

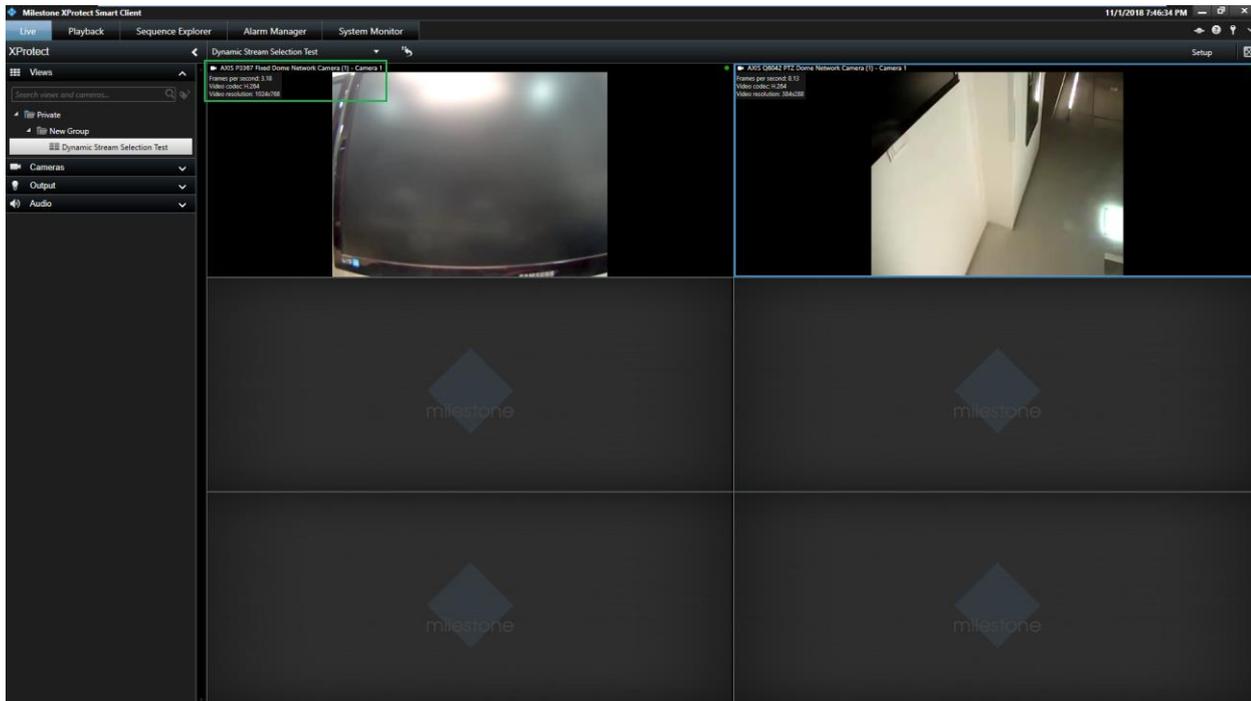

2. Change the values according to your preferences.
3. Click **Update**.
4. Click **Close**.

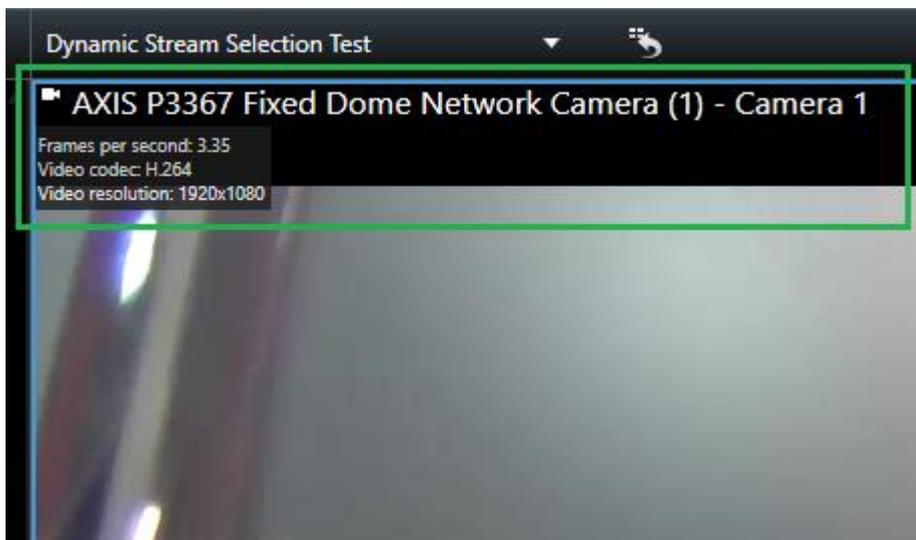

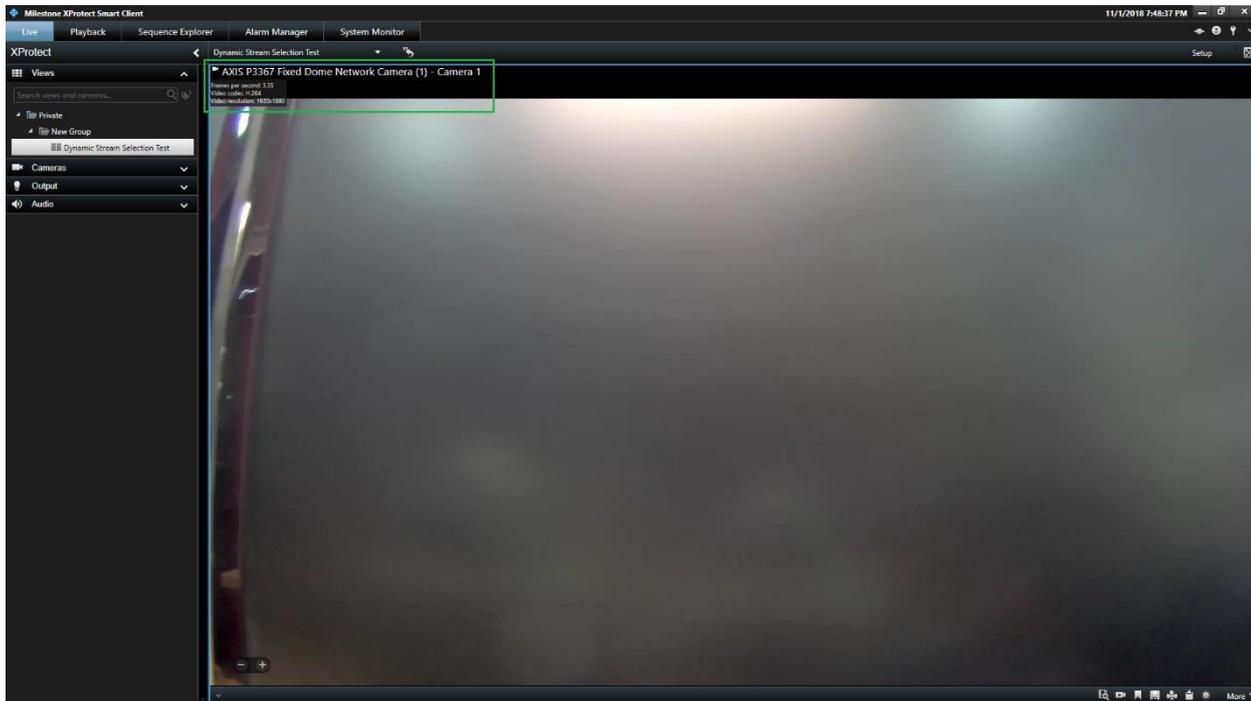

Operation

Smart Client

There are two cameras in the figure below. **AXIS P3367 Fixed Dome Network Camera (1) - Camera 1** does have two configured streams containing strings **High** and **Low** in the names. **AXIS Q6042 PTZ Dome Network Camera (1) - Camera 1** does have only one stream configured.

When **AXIS P3367 Fixed Dome Network Camera (1) - Camera 1** view reaches the size 800x600, the stream will be switched to **High** as shown below on the figure.

Note The plug-in functionality works only in Live mode of the Smart Client. When the stream is switched, it can cause the Smart Client camera view item to flicker or freeze for a moment.

Troubleshooting

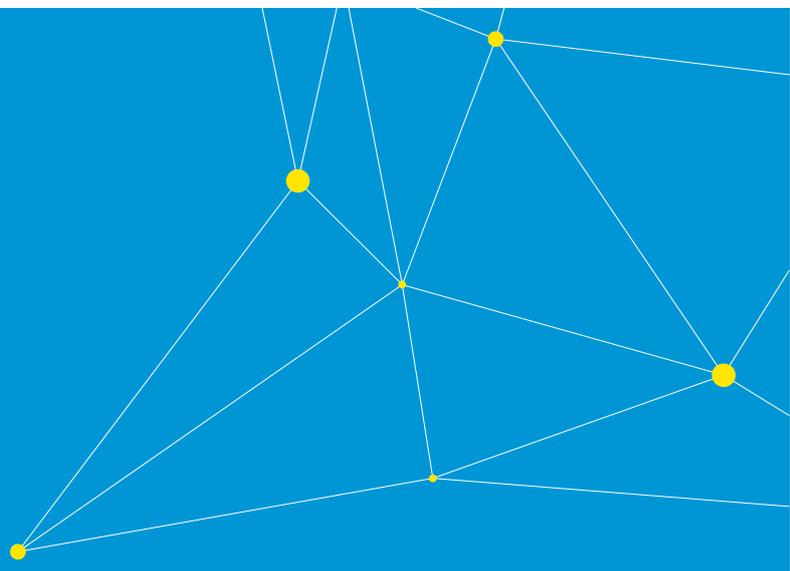

Please check the configuration again if Dynamic Stream Selection plug-in does not work properly.

Limitations

1. Dynamic Stream Selection plug-in functionality works only for the first camera if a camera is added twice or more in the same Smart Client view.
2. Dynamic Stream Selection plug-in functionality does not work in case the view is sent to **Primary Display** or **Floating Window**.

Known issues

There are no known issues at the time of the release.

Milestone Systems is a leading provider of open platform video management software; technology that helps the world see how to ensure safety, protect assets and increase business efficiency. Milestone enables an open platform community that drives collaboration and innovation in the development and use of network video technology, with reliable and scalable solutions that are proven in more than 150,000 sites worldwide. Founded in 1998, Milestone is a stand-alone company in the Canon Group.
