1. What is PrivacyProtect?

PrivacyProtect is a windows desktop application which is integreted with Milestone XProtect that provides customized privacy and security for exported videos. It can analyze and extract human faces and provides easy to use interface for user to specify various types of selection to create export with optimal privacy/security. With PrivacyProtect, any custom video(s) or recorded video using Milestone XProtect can be exported with user selected (or all) faces filtered.

2. Dependencies

PrivacyProtect analyzes and processes videos with Nvidia CUDA library. In order to work proper, your hardware must be compatible with CUDA. You can check whether your GPU is compatible with CUDA or not by looking at <u>https://developer.nvidia.com/cuda-gpus</u>.

PrivacyProtect GUI uses .Net Framework 4.5. In order to install the program properly, you should install .Net Framework 4.5 or higher first.

All other dependencies are provided by PrivacyProtect installation.

3.Installation

After providing and installing proper dependencies, you can start to install PrivacyProtect.
