BRIDGE TO XPROTECT
MILESTONE INTEGRATION SOFTWARE

BTX® is middleware that integrates third-party devices and software with the open platform of Milestone XProtect®.

- Access Control
- Audio Analytics
- CCTV & Alarm Systems
- Notification Networks
- Motion & Laser Detection
- Perimeter & Asset Protection
- Safety Call Boxes
- SNMP Traps
- Video Analytics

BTX® analyzes incoming data, then based on user-defined rules and schedules, transforms that data into XProtect to ...

- Generate Alarms with Video Bookmarks.
- Generate Events with Video Bookmarks.
- Trigger User-defined Events
- Trigger Smart Client Matrix Views.
- Trigger PTZ Commands for any camera, even from those from which a given event did not originate

BTX® will either push or pull data from third party systems to Milestone's event subsystems.

MILESTONE INTEGRATION PARTNERS

BTX® classifies, filters, and groups third-party events and alarms. This provide additional control over when and how third-party events are forwarded to Milestone.

BTX device-specific configuration options include:

- ⊶ ASSOCIATE third-party device alarms with cameras, PTZ presets, speakers, networked devices, and user-defined events.

- ⊶ THROTTLE high frequency event and alarm rates to reduce false-positives.

- ⊶ SET TRIGGER THRESHOLDS to require multiple, confirming alarms before sending a master alarm to Milestone.

- ⊶ SCHEDULES defines specific time periods within which incoming events and alarms should be processed

- ⊶ "DOUBLE-KNOCK" combines incoming events and alarms from any combination of devices to produce a single event or alarm within XProtect
