

Gallagher Milestone VMS Integration

A bi-directional events integration between Command Centre and XProtect that allows either to be the front-end system.

Integration features

Gallagher Command Centre and Milestone XProtect have a bi-directional integration that allows operators to confidently manage incidents on site in a way that suits them. Events can be viewed, alarms can be actioned, doors can be opened and video can be viewed in either system. Any of these actions performed in one system is automatically updated in the other, providing a single source of truth for event information.

A Command Centre operator can view the video associated with an alarm, (e.g. motion detection alarm) acknowledge and process the alarm in Command Centre.

Map key Command Centre events to Milestone. A Milestone operator can view details about the incident and process it within Milestone.

Use video surveillance to visually compare a cardholder with their cardholder image in Command Centre or Milestone. If the image matches, the operator can grant access (Controlled Challenge).

Use license plate recognition to identify a cardholder at a boom gate. If the number plate is assigned to a cardholder in Command Centre, the system can be configured to grant access.

View live video in Command Centre

Video is streamed from Milestone to Gallagher Command Centre. The video is displayed in Command Centre.

- Click a camera icon on a site plan to view live video.
- Drag and drop a camera icon from a site plan to a camera tile to view live video.
- Pre-configure a camera tile to view live video from a camera.
- Pre-configure a camera tile to display live video in response to an event, (e.g. door event or intercom event).
- Place multiple camera tiles alongside each other to view video from multiple cameras simultaneously (up to 16 camera tiles can be used to simultaneously display video on a single viewer).
- Adjust the camera's pan, tilt, and zoom (as supported by the camera).
- Move a camera to a set position (as supported by the camera).
- Capture an image of the current frame.

View stored video in Command Centre

Video is stored by Milestone and retrieved by Gallagher Command Centre. The video is displayed in Command Centre.

- View stored video associated with an alarm.
- View pre-alarm and post-alarm video.
- Search for stored video associated with an alarm.
- Adjust the speed and direction of video playback.
- Capture an image of the current frame.
- View stored video associated with an alarm on a Spot Monitor Viewer (full screen viewer).
- Toggle between stored video and live video, for the camera.

Gallagher Milestone VMS Integration

Command Centre instructions

- Send a message to Milestone requesting footage from specified cameras. For example, an alarm generated at a door can retrieve stored video from the door's camera.
- Instruct a Milestone camera to move to a preset. For example, an alarm generated at a fence zone can result in Milestone moving a camera to a preset.

License plate recognition

Milestone's license plate recognition software reads license plate information from vehicles and links the license plate information with video. The license plate number is associated to a Command Centre cardholder, allowing an access decision to occur when recognition of a number plate occurs at a boom gate.

Perform Command Centre functions in XProtect

- Command Centre events and alarms are mapped to Milestone.
- Command Centre doors can be viewed and opened.
- The status of Command Centre doors can be viewed and doors opened.
- Command Centre cardholder images and personal data fields can be viewed in XProtect.

Milestone events

Milestone events including motion detection, automatic number plate recognition, and diagnostic events can be mapped to Command Centre.
