1 Introduction

1.1 Purpose

UNION-Broadcast System is an integrated audio management broadcasting system software that utilizes network speakers, developed by Sunjin Infotech Co., Ltd. The UNION-Broadcast System consists of a server and client structure.

This document describes how to install the Broadcasting Server software and the Broadcasting Client Plug-In installed on the XProtect Smart Client. The Union Broadcast system is basically built based on the environment analysis and design of Sunjin Infotech technology and service engineers, and is provided to customers in the form of an appliance, Such as broadcasting server software settings and device information input are described in 'Administrator Guide', and client-related information is described in the 'User Guide'. This document is not intended to be read by anyone other than Sunjin Infotech empolyees, employees, partners, and end users.

1.2 Definition

- The product is basically provided to the customer in the form of an appliance including hardware.
- System construction is performed by Sunjin Infotech technology and service engineers (on-site or remote support.).
- In order to use this system, a license must be obtained from the manufacturer, Sunjin Infotech Co., Ltd.
- In order to install and use this software, a network and computer environment must be configured.
- The present system can receive an event in conjunction with Milestone Systems' Video Management System.
- Interconnecting device or system may incur charges depending on type and quantity. Please discuss this with Sunjin Infotech sales Team. In addition, the protocols of interlocking devices and systems must be open, and sufficient information and test environment must be provided to Sunjin Infotech.
- The system uses Maria DB and accesses the database using Open Database Connectivity (ODBC).
- The system consists of and manages interconnecting device, an event, a network speaker, and user based on departments.
- The account and department policies used are based on the information set in the Milestone XProtect Management Client.

In order to use UNION-Broadcast Plug-In functions, Milestone XProtect VMS Product and UNION-Broadcast Server software must be installed

- Broadcast traffic is managed by priority, and it is possible to control the speaker approved by requesting the use of broadcast to the server.
- Union-Broadcast Server software manages users, broadcasting traffic, infrastructure, etc. Union-Broadcast client plug-in installed in XProtect Smart Client can set and control broadcasting and receive various event notifications.

2 Union-Broadcast Server Installation

One broadcasting server software is installed in one logical system environment.

2.1 Install package file

The 'UNION-Broadcast Plug-In Server.msi' file is provided by the manufacturer (Sunjin Infotecth Co., Ltd.) . It can install UNION-Broadcast Server using this installation file, and if it is already installed, you can use it for repair or delete. (Repair and delete can also be done in Control Panel.Control Panel > Programs > Programs and Features)

2.2 Installation

1. When you run the 'Union-Broadcast Plug-In Server.msi' file, Pop-up install windows, the first welcome page is displayed. Click the 'Next' button.

2. After checking the contents in the installation information page, click the 'Next' button.

3. In the installation path setting page, specify the path to install the program and click the 'Next' Button.
