Regulatory Compliance Statements

This section provides the FCC compliance statement for Class A devices and describes how to keep the system CE compliant.

Declaration of Conformity

FCC

This equipment has been tested and verified to comply with the limits for a Class A digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential area (domestic environment) is likely to cause harmful interference, in which case the user will be required to correct the interference (take adequate measures) at their own expense.

CE

The product(s) described in this manual complies with all applicable European Union (CE) directives if it has a CE marking. For computer systems to remain CE compliant, only CE-compliant parts may be used. Maintaining CE compliance also requires proper cable and cabling techniques.

RoHS Compliance

NEXCOM RoHS Environmental Policy and Status Update

NEXCOM is a global citizen for building the digital infrastructure. We are committed to providing green products and services, which are compliant with European Union RoHS (Restriction on Use of Hazardous Substance in Electronic Equipment) directive 2011/65/EU, to be your trusted green partner and to protect our environment.

RoHS restricts the use of Lead (Pb) < 0.1% or 1,000ppm, Mercury (Hg) < 0.1% or 1,000ppm, Cadmium (Cd) < 0.01% or 100ppm, Hexavalent Chromium (Cr6+) < 0.1% or 1,000ppm, Polybrominated biphenyls (PBB) < 0.1% or 1,000ppm, and Polybrominated diphenyl Ethers (PBDE) < 0.1% or 1,000ppm.

In order to meet the RoHS compliant directives, NEXCOM has established an engineering and manufacturing task force in to implement the introduction of green products. The task force will ensure that we follow the standard NEXCOM development procedure and that all the new RoHS components and new manufacturing processes maintain the highest industry quality levels for which NEXCOM are renowned.

How to recognize NEXCOM RoHS Products?

For existing products where there are non-RoHS and RoHS versions, the suffix "(LF)" will be added to the compliant product name.

All new product models launched after January 2013 will be RoHS compliant. They will use the usual NEXCOM naming convention.

Warranty and RMA

NEXCOM Warranty Period

NEXCOM manufactures products that are new or equivalent to new in accordance with industry standard. NEXCOM warrants that products will be free from defect in material and workmanship for 2 years, beginning on the date of invoice by NEXCOM. HCP series products (Blade Server) which are manufactured by NEXCOM are covered by a three year warranty period.

NEXCOM Return Merchandise Authorization (RMA)

- Customers shall enclose the “NEXCOM RMA Service Form” with the returned packages.
- Customers must collect all the information about the problems encountered and note anything abnormal or, print out any on-screen messages, and describe the problems on the “NEXCOM RMA Service Form” for the RMA number apply process.
- Customers can send back the faulty products with or without accessories (manuals, cable, etc.) and any components from the card, such as CPU and RAM. If the components were suspected as part of the problems, please note clearly which components are included. Otherwise, NEXCOM is not responsible for the devices/parts.
- Customers are responsible for the safe packaging of defective products, making sure it is durable enough to be resistant against further damage and deterioration during transportation. In case of damages occurred during transportation, the repair is treated as “Out of Warranty.”
- Any products returned by NEXCOM to other locations besides the customers’ site will bear an extra charge and will be billed to the customer.

Repair Service Charges for Out-of-Warranty Products

NEXCOM will charge for out-of-warranty products in two categories, one is basic diagnostic fee and another is component (product) fee.

System Level

- Component fee: NEXCOM will only charge for main components such as SMD chip, BGA chip, etc. Passive components will be repaired for free, ex: resistor, capacitor.
- Items will be replaced with NEXCOM products if the original one cannot be repaired. Ex: motherboard, power supply, etc.
- Replace with 3rd party products if needed.
- If RMA goods can not be repaired, NEXCOM will return it to the customer without any charge.

Board Level

- Component fee: NEXCOM will only charge for main components, such as SMD chip, BGA chip, etc. Passive components will be repaired for free, ex: resistors, capacitors.
- If RMA goods can not be repaired, NEXCOM will return it to the customer without any charge.

Warnings

Read and adhere to all warnings, cautions, and notices in this guide and the documentation supplied with the chassis, power supply, and accessory modules. If the instructions for the chassis and power supply are inconsistent with these instructions or the instructions for accessory modules, contact the supplier to find out how you can ensure that your computer meets safety and regulatory requirements.

Cautions

Electrostatic discharge (ESD) can damage system components. Do the described procedures only at an ESD workstation. If no such station is available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.

Safety Information

Before installing and using the device, note the following precautions:

- Read all instructions carefully.
- Do not place the unit on an unstable surface, cart, or stand.
- Follow all warnings and cautions in this manual.
- When replacing parts, ensure that your service technician uses parts specified by the manufacturer.
- Avoid using the system near water, in direct sunlight, or near a heating device.
- The load of the system unit does not solely rely for support from the rackmounts located on the sides. Firm support from the bottom is highly necessary in order to provide balance stability.
- The computer is provided with a battery-powered real-time clock circuit. There is a danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

Installation Recommendations

Ensure you have a stable, clean working environment. Dust and dirt can get into components and cause a malfunction. Use containers to keep small components separated.

Adequate lighting and proper tools can prevent you from accidentally damaging the internal components. Most of the procedures that follow require only a few simple tools, including the following:

- A Philips screwdriver
- A flat-tipped screwdriver
- A grounding strap
- An anti-static pad

Using your fingers can disconnect most of the connections. It is recommended that you do not use needlenose pliers to disconnect connections as these can damage the soft metal or plastic parts of the connectors.

Warning!

1. Handling the unit: carry the unit with both hands and handle it with care.
2. Maintenance: to keep the unit clean, use only approved cleaning products or clean with a dry cloth.
3. CompactFlash: Turn off the unit's power before inserting or removing a CompactFlash storage card.
4. SIM: Do not insert or remove the SIM card when the **system is powered** on. Always **power** off the **system** before inserting or removing the SIM card.

Safety Precautions

- Read these safety instructions carefully.
- Keep this User Manual for later reference.
- Disconnect this equipment from any AC outlet before cleaning. Use a damp cloth. Do not use liquid or spray detergents for cleaning.
- For plug-in equipment, the power outlet socket must be located near the equipment and must be easily accessible.
- Keep this equipment away from humidity.
- Put this equipment on a stable surface during installation. Dropping it or letting it fall may cause damage.
- Do not leave this equipment in either an unconditioned environment or in a above 40°C storage temperature as this may damage the equipment.
- The openings on the enclosure are for air convection to protect the equipment from overheating. DO NOT COVER THE OPENINGS.
- Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.
- Place the power cord in a way so that people will not step on it. Do not place anything on top of the power cord. Use a power cord that has been approved for use with the product and that it matches the voltage and current marked on the product's electrical range label. The voltage and current rating of the cord must be greater than the voltage and current rating marked on the product.
- All cautions and warnings on the equipment should be noted.
- If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient overvoltage.
- Never pour any liquid into an opening. This may cause fire or electrical shock.
- Never open the equipment. For safety reasons, the equipment should be opened only by qualified service personnel.
- If one of the following situations arises, get the equipment checked by service personnel:
 - a. The power cord or plug is damaged.
 - b. Liquid has penetrated into the equipment.
 - c. The equipment has been exposed to moisture.
 - d. The equipment does not work well, or you cannot get it to work according to the user's manual.
 - e. The equipment has been dropped and damaged.
 - f. The equipment has obvious signs of breakage.
- Do not place heavy objects on the equipment.
- The unit uses a three-wire ground cable which is equipped with a third pin to ground the unit and prevent electric shock. Do not defeat the purpose of this pin. If your outlet does not support this kind of plug, contact your electrician to replace your obsolete outlet.
- CAUTION: DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH THE SAME OR EQUIVALENT TYPE RECOMMENDED BY THE MANUFACTURER. DISCARD USED BATTERIES ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS.

Technical Support and Assistance

1. For the most updated information of NEXCOM products, visit NEXCOM's website at www.nexcom.com.
2. For technical issues that require contacting our technical support team or sales representative, please have the following information ready before calling:
 - Product name and serial number
 - Detailed information of the peripheral devices
 - Detailed information of the installed software (operating system, version, application software, etc.)
 - A complete description of the problem
 - The exact wordings of the error messages

Warning!

1. Handling the unit: carry the unit with both hands and handle it with care.
2. Maintenance: to keep the unit clean, use only approved cleaning products or clean with a dry cloth.

Conventions Used in this Manual

Warning:

Information about certain situations, which if not observed, can cause personal injury. This will prevent injury to yourself when performing a task.

Caution:

Information to avoid damaging components or losing data.

Note:

Provides additional information to complete a task easily.

CHAPTER 1: PRODUCT INTRODUCTION

Physical Features

Front View

Rear View

Overview

ATC 8010, powerful and reliable Artificial Intelligent (AI) platform, is specially designed for applications, such as ANPR, AFR and highly-demanding on graphics performance. Its updated Intel® Coffee Lake desktop 35W CPU, and NVIDIA 1050Ti graphics card guarantee the graphics performance, which satisfies most of the Automated Intelligent (AI) requirements. 8-Port 802.3af/at PoE, offers wide bandwidth and precise control to the analysis of big video data. Besides, ultraONE+ technology commits the transmission of video and audio, up to 10 meters distance. 5 x HDMI and 1 x VGA let users monitor the immediate video without any delay and blind spot. RAID 0, 1, 5, 10 guarantee the safety of video data in the 2 x external SSD, and 2 x mSATA. The design of swappable fans makes it easier to maintain.

Key Features

- Intel® Coffee Lake-S Desktop, i7-8700T, 2.4GHz
- NVIDIA GTX 1050Ti MXM graphic module supported
- 8 x 10/100/1000 PoE 802.3af/at
- 1 x VGA and 5 x HDMI video output
- ultraONE+ for 10-Meter video + audio output
- 2 x External SSD and 2 x mSATA for RAID 0, 1, 5, 10
- 2 x WWAN module and 3 x SIM socket with eSIM option
- Swappable fan kit
- 3 x mini-PCle and 1 x M.2
- CE/FCC/E-mark

Hardware Specifications

CPU

- Intel® Coffee Lake-S, i7-8700T, 2.4GHz, 35W, 6 core

Memory

- 2-Channel 204-pin DDR4 SO-DIMM sockets up to 16GB/channel (32G for two channels), default 8GB industrial grade memory

GPU

- NVIDIA GeForce GTX 1050Ti MXM module
- Memory size: 4GB GDDR5
- CUDA core: 768
- GPU clock: 1493 MHz
- Memory clock: 7.0 GHz
- Memory interface width: 128-bit

Storage

- 2 x 2.5" SATA 3.0 external SSD
- 2 x mSATA

Expansion

- 1 x Full size mini-PCIe socket (USB 2.0, PCIe 3.0, SATA 3.0)
- 1 x Full size mini-PCIe socket (USB 2.0, USB 3.1), optional M.2 key B (3042)
- 1 x Full size mini-PCIe socket (USB 2.0, PCIe 3.0, SATA 3.0 [optional])
- 1 x M.2 key B (USB 2.0, USB 3.1)

GNSS and Onboard Sensor

- 1 x Default U-blox NEO-M8N GNSS module for GPS/Glonass/QZSS/Galileo/Beidou
- Optional modules with dead reckoning available
- Built-in TPM 2.0

Power over Ethernet

- 8-Port LAN, 10/100/1000 Mbps, PoE 802.3af/at, max. 60W
- 1-Port LAN, 10/100/1000 Mbps

I/O Interface-Front

- 24 x LED indicators (including 4 x programmable LEDs)
- 1 x HDMI 1.4b. 4 x HDMI 2.0
- 1 x VGA
- 1 x ultraONE+ for 10M video + audio output
- 2 x USB 3.1 type A (5V/1A)
- 2 x Externally accessible SIM card sockets
- 2 x 2.5" removable SSD trays
- 1 x Reset button
- 1 x Power button
- 5 x SMA antennas

I/O Interface-Rear

- 8 x PoE 802.3af/at (Max. 60W)
- 1-Port LAN, 10/100/1000 Mbps
- 1 x 5-pin terminal block for 9V~36V DC
- 1 x Mic-in, 1 x Line-out
- 4 x 2 connector for 12VDC/2A output, RS232 for VTK62B, power button, 2 x MDI
- 2 x DB9 for full RS232
- 1 x DB9 for full RS232/422/485 (RI, 5V/0.5A, 12V/0.5A)
- 1 x DB15
 - 1 x Isolated CANBus 2.0B
 - 1 x GPS DR
 - 4 x DI and 4 x DO
- 4 x SMA antennas
- 4 x USB 3.1 type A (5V/1A)

Power Management

- Selectable boot-up & shut-down voltage for low power protection by software
- Setting 8-level power on/off delay time by software
- Support S3/S4 suspend mode

Operating System

- Windows 10/YOCTO (by request)

Dimensions

- 260 x 196 x 99 (W x D x H) (mm)

Weight

- 4kg

Environment

- Operating temperatures
 - 30°C~70°C (w/industrial SSD) with air flow
- Storage temperatures: -40°C~80°C
- Relative humidity: 90% (non-condensing)
- Vibration (random)
 - 2g@5~500 Hz (in operation, SSD)
- Vibration (SSD)
 - Operating: MIL-STD-810G, Method 514.6, Category 4, common carrier US highway truck vibration exposure
 - Storage: MIL-STD-810G, Method 514.6, Category 24, minimum integrity test
- Shock (SSD)
 - Operating: MIL-STD-810G, Method 516.6, Procedure I, functional shock=40g
 - Non-operating: MIL-STD-810G, Method 516.6, Procedure V, crash hazard shock test=75g

Certifications

- CE approval
- FCC Class A
- E13 Mark

Connector Numbering

The following diagrams indicate the numbers of the connectors. Use these numbers to locate the connectors' respective pinout assignments on chapter 2 of the manual.

CHAPTER 2: EXTERNAL CONNECTORS PINOUT DESCRIPTION

Dual HDMI Connector

Connector number: 1

Pin	Definition	Pin	Definition

7	LAN X _MDI_3P	8	LAN X _MDI_3N

Red 'X' denotes the port number.

CHAPTER 3: JUMPERS AND SWITCHES

This chapter describes how to set the jumpers on the ATC 8010 motherboard.

Before You Begin

- Ensure you have a stable, clean working environment. Dust and dirt can get into components and cause a malfunction. Use containers to keep small components separated.
- Adequate lighting and proper tools can prevent you from accidentally damaging the internal components. Most of the procedures that follow require only a few simple tools, including the following:
 - A Philips screwdriver
 - A flat-tipped screwdriver
 - A set of jewelers screwdrivers
 - A grounding strap
 - An anti-static pad
- Using your fingers can disconnect most of the connections. It is recommended that you do not use needle-nosed pliers to disconnect connections as these can damage the soft metal or plastic parts of the connectors.
- Before working on internal components, make sure that the power is off. Ground yourself before touching any internal components, by touching a metal object. Static electricity can damage many of the electronic components. Humid environment tend to have less static electricity than dry environments. A grounding strap is warranted whenever danger of static electricity exists.

Precautions

Computer components and electronic circuit boards can be damaged by discharges of static electricity. Working on the computers that are still connected to a power supply can be extremely dangerous.

Follow the guidelines below to avoid damage to your computer or yourself:

- Always disconnect the unit from the power outlet whenever you are working inside the case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal chassis of the unit case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Don't flex or stress the circuit board.
- Leave all components inside the static-proof packaging that they shipped with until they are ready for installation.
- Use correct screws and do not over tighten screws.

Jumper Settings

A jumper is the simplest kind of electric switch. It consists of two metal pins and a cap. When setting the jumpers, ensure that the jumper caps are placed on the correct pins. When the jumper cap is placed on both pins, the jumper is short. If you remove the jumper cap, or place the jumper cap on just one pin, the jumper is open.

Refer to the illustrations below for examples of what the 2-pin and 3-pin jumpers look like when they are short (on) and open (off).

Two-Pin Jumpers: Open (Left) and Short (Right)

Three-Pin Jumpers: Pins 1 and 2 are Short

ATC 8010 System Components

The ATC 8010 consists of a motherboard and PoE board. This chapter describes the location and pinout assignment of the jumpers and connectors on each component.

Locations of the Jumpers and Connectors for the Motherboard

CHAPTER 4: SYSTEM SETUP

Removing the Chassis Cover

Prior to removing the chassis cover, make sure the unit's power is off and disconnected from the power sources to prevent electric shock or system damage.

1. Remove the screws on the front panel.

2. Remove the screws on the rear panel.

3. Remove the mounting bracket screws on the bottom of the enclosure.

4. After removing the brackets, loosen the screws on the bottom then remove the chassis top cover.

Removing the MXM Module

1. Remove the screws securing the MXM module.

2. Remove the MXM module from the socket.

Removing the CPU

1. Locate the CPU socket and unlock the socket by pushing the load lever down, moving it sideways until it is released from the retention tab; then lift the load lever up.

Load Lever

Retention Tab

2. Lift the load plate up and remove the CPU from the socket.

Removing the Memory Module

1. Push the ejector tabs which are at the ends of the socket outward. Then lift up the module and remove it from the socket.

Installing a WWAN Module (Mini-PCle)

1. Locate the WWAN Mini PCI Express slot (CN11). Insert the module into the Mini PCI Express slot at a 45 degrees angle until the gold-plated connector on the edge of the module completely disappears inside the slot. Then fasten screws into the mounting holes to secure the module.

**Mounting
Screws**

Installing a WWAN Module (M.2)

1. Locate the M.2 slot (CN10). Insert the module into the M.2 slot at a 45 degrees angle until the gold-plated connector on the edge of the module completely disappears inside the slot. Then fasten a screw into the mounting hole to secure the module.

**Mounting
Screw**

Installing a WLAN Module (Half Mini-PCIe)

1. Locate the WLAN Mini PCI Express slot (CN9). Insert the module into the Mini PCI Express slot at a 45 degrees angle until the gold-plated connector on the edge of the module completely disappears inside the slot. Then fasten a screw into the mounting hole to secure the module.

**Mounting
Screw**

Installing a SIM Card

1. Remove the SIM card cover.

2. Insert the SIM card into the SIM card slot.

3. Close the cover and secure it to the original position.

Installing a SSD/HDD Drive

1. The SSD/HDD bays on the front are used to install 2.5" hard drives. Loosen the thumb screws and remove the cover.

2. Place the storage drive into the drive bay with the SATA data and power connector facing towards the end. Align the storage drive's mounting holes with the mounting holes on the drive bay, and use the provided screws to secure the storage drive in place.

3. Insert the drive bay back to its original position and secure the thumb screws.

Replacing the System Fan

1. Loosen the thumb screws on the front panel.

2. Loosen the thumb screws on the rear panel. The fan kit can be removed from the top cover.

3. On the top cover, loosen the mounting screws of the fan kit that will be replaced.

4. Turn to the back side of the top cover and loosen the screws on the cover for the fan cable connectors.

5. Turn to the back of the fan cable cover and remove the fan cable connector that will be replaced. Then proceed to install the new fan kit.

2. Config2

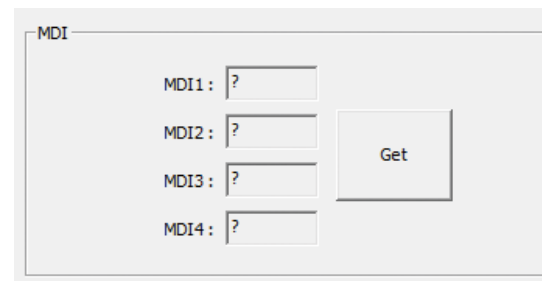

2.1 GPO

Configures GPO as high voltage level or low voltage level.

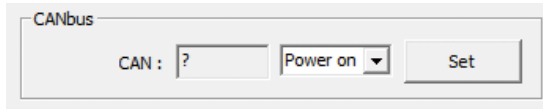

2.2 GPI

Reads the status (voltage level) of GPI.

2.3 CAN Bus

Enables or disables the CAN Bus function.

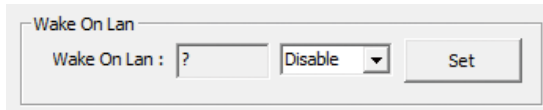

CANbus

CAN : ? Power on Set

2.4 Wake On LAN

Enables or disables the Wake On LAN function on LAN.

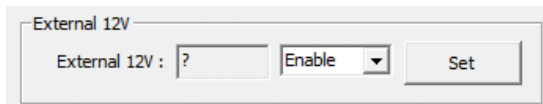

Wake On Lan

Wake On Lan : ? Disable Set

2.5 External 12V

Enables or disables the 12VDC power output.

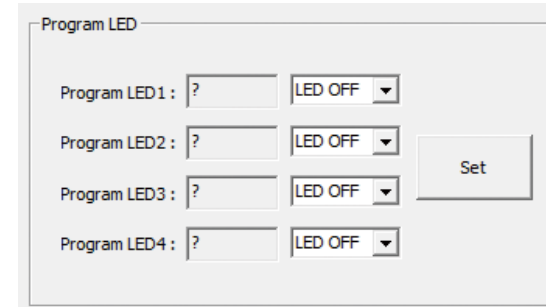

External 12V

External 12V : ? Enable Set

2.6 Programmable LED

Turns On/Off LED light.

Program LED

Program LED1 : ? LED OFF

Program LED2 : ? LED OFF

Program LED3 : ? LED OFF

Program LED4 : ? LED OFF

Set

3. Config3

The screenshot shows the ATC8010_Utility application window with the Config3 tab selected. The interface is divided into several sections:

- Low Battery Voltage Protection:** Features a 'Voltage Level' dropdown menu with a '?' placeholder and a 'Set' button. Above it are two pairs of '12V / 24V Startup/Shutdown' labels with corresponding dropdown menus.
- Power Input Type:** Includes a 'Power Type' dropdown menu with a '?' placeholder and a 'Get' button.
- Delay Time:** Contains four input fields: 'Delay Off' (with a '?' placeholder and a 'Disable' dropdown), 'Power Off' (with a '?' placeholder and a '20 Sec' dropdown), 'Delay On' (with a '?' placeholder and a 'Disable' dropdown), and 'Power On' (with a '?' placeholder and a '10 Sec' dropdown). A 'Set' button is located to the right.
- RTC Wake Up Timer:** Includes an 'Alarm' dropdown menu with a '?' placeholder and a 'Disable' dropdown, and a 'Set' button. Below this is an 'Alarm Timer' section with 'Hour', 'Min', and 'Sec' dropdown menus, each with a '?' placeholder and a '0' value, and a 'Set' button.

At the bottom of the window are 'Load Default' and 'Save' buttons.

3.1 Low Battery Voltage Protection

Enables or disables low battery voltage protection function. Once it is enabled, one of 4 types of voltage levels can be selected.

This close-up shows the 'Low Battery Voltage Protection' section. It features a 'Voltage Level' dropdown menu with a '?' placeholder and a 'Set' button. Above the dropdown are two pairs of '12V / 24V Startup/Shutdown' labels with corresponding dropdown menus.

3.2 Power Type

Shows one of the following power types for input voltage:

- 12VDC
- 24VDC
- 9~36VDC

This close-up shows the 'Power Input Type' section. It includes a 'Power Type' dropdown menu with a '?' placeholder and a 'Get' button.

3.3 Delay On/Off Timer

Enables or disables the Delay On/Off function. Once this function is enabled, the delay timer can be configured.

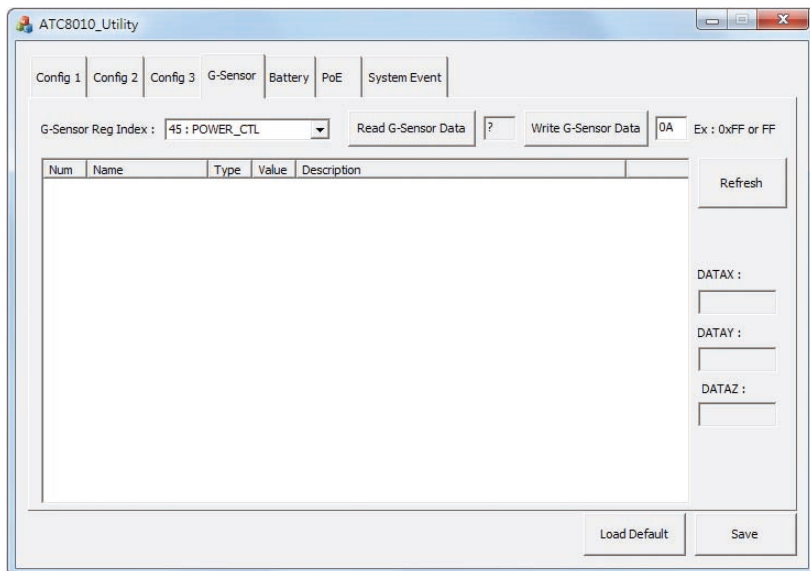

This close-up shows the 'Delay Time' section. It contains four input fields: 'Delay Off' (with a '?' placeholder and a 'Disable' dropdown), 'Power Off' (with a '?' placeholder and a '20 Sec' dropdown), 'Delay On' (with a '?' placeholder and a 'Disable' dropdown), and 'Power On' (with a '?' placeholder and a '10 Sec' dropdown). A 'Set' button is located to the right.

3.4 RTC Wake Up Timer

Enables or disables the RTC Wake Up function. Once this function is enabled, the timer can be configured.

This close-up shows the 'RTC Wake Up Timer' section. It includes an 'Alarm' dropdown menu with a '?' placeholder and a 'Disable' dropdown, and a 'Set' button. Below this is an 'Alarm Timer' section with 'Hour', 'Min', and 'Sec' dropdown menus, each with a '?' placeholder and a '0' value, and a 'Set' button.

4. G-Sensor

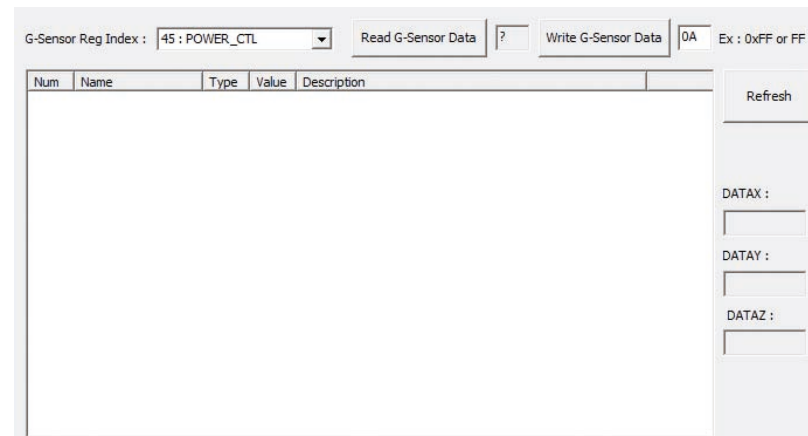

4.1 G-Sensor Registers

Selects the registers inside G-Sensor to read or write the data.

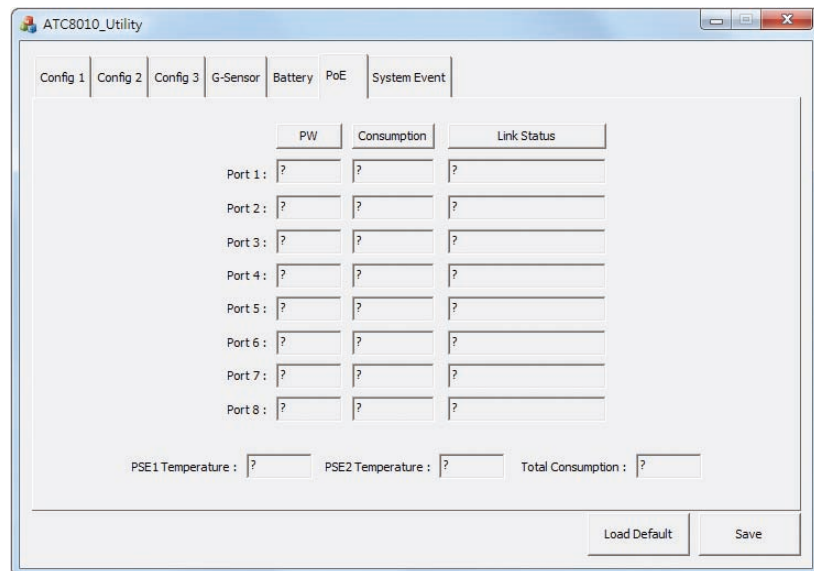

4.2 Register Table

Shows the value of all registers in G-Sensor, once the Refresh button is pressed.

5. PoE

5.1 PoE

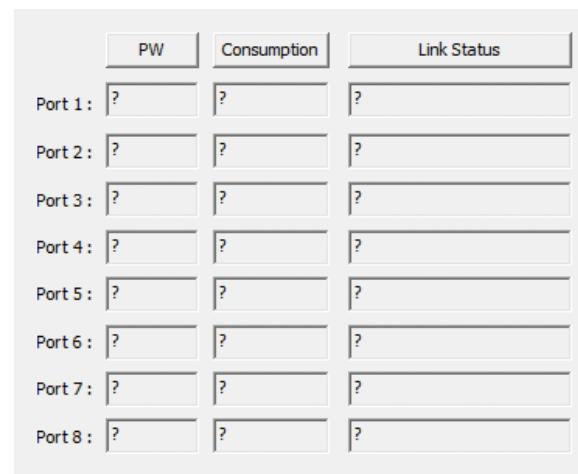

Shows the status of PoE power output.

5.2 Output (W)

Shows the power output of each PoE port.

5.3 Link Status

Shows the status of PoE link.

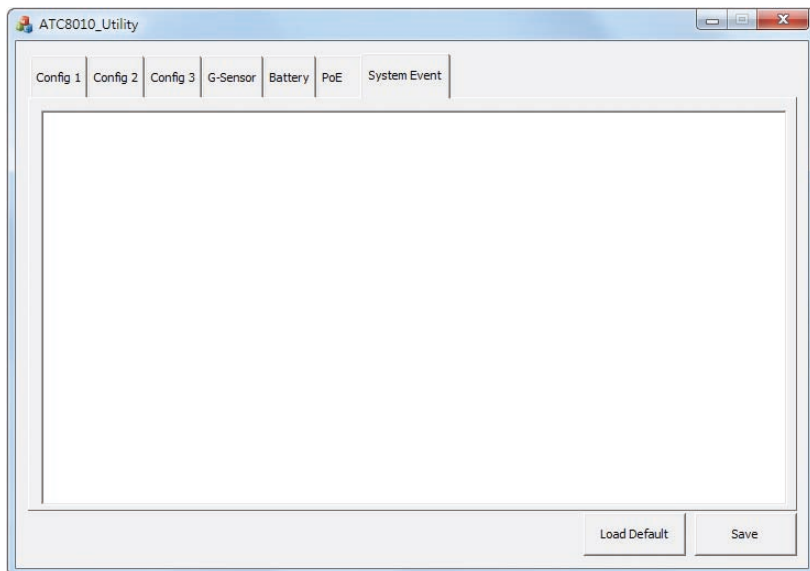

5.4 Total Output (W)

Shows the total power output of all PoE ports.

6. System Event

The System Event tab shows the following alarm messages:

1. Over voltage alarm
2. Lower voltage alarm
3. Over temperature alarm
4. Lower temperature alarm
5. Fan error alarm
