

## About Milestone Systems

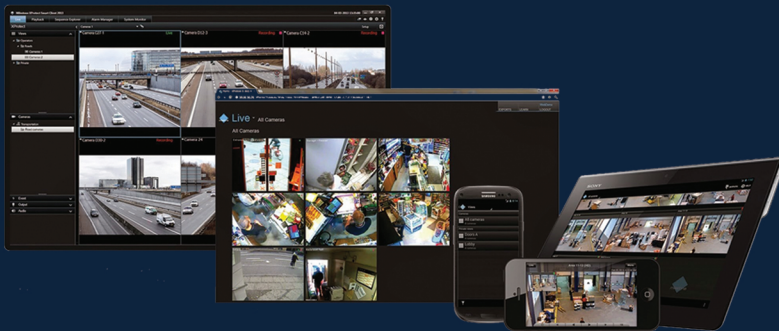

TDS is proud to integrate with Milestone Systems, a world-leading provider of open platform IP Video Management software. As a dedicated provider of high quality video platform software, Milestone Systems integrate with TDS Access to provide securely monitored environments for organisations around the world.

## How Milestone XProtect<sup>®</sup> Access Works

XProtect<sup>®</sup> Access is an optional add-on module to Milestones XProtect Video Management system and integration option for TDS Access users.

When integrated, the add-on module allows operators to control both video cameras and TDS Access inside Milestone's XProtect<sup>®</sup> interface. Inside this interface, operators can track employees and third-party personnel in real-time while also monitoring Access Control events and alarms on the XProtect<sup>®</sup> Smart Client. By coupling video and Access Control events, operators are able to view access events.

Additionally, operators can export videos associated with specific alarms in real-time with the on-board reporting features. This integration supports the most recent versions of TDS Access and XProtect<sup>®</sup>

## Integration Benefits

- Centralised Interface
- Optimised Security Processes
- Improved Work Efficiency
- Improved Decision Making
- Increased On-Site Visibility

## Why Video-Enable TDS Access?

**Better Decision Making:** Operators can visually verify individuals requesting access to authorised zones, enabling operators to make real-time decisions.

**Improved Work Efficiency:** By operating and monitoring video surveillance and Access Control from a centralised interface, less time can be spent managing two disparate solutions.

**Hightened Insights:** As security are provided with video information linked to each exit and entry, post-incident investigations can be more thorough. Threats of unauthorised individuals can be pinpointed to an exact entry location breach and measures can be made to ensure security standards are improved.

## Advanced Features

- ⦿ Graphical Mapping of TDS Access and CCTV
- ⦿ Real-Time User Request Handling from Live Maps
- ⦿ Mobile Application for on-the-go control
- ⦿ TDS Access Event Logging
- ⦿ Cardholder Displaying in Event Window
- ⦿ Embedded HTML Support
- ⦿ Access Point Monitoring
- ⦿ Security Alert Response
