

# Salto Systems integrated with Milestone Xprotect® Access

## Description

This integration allows the incorporation of the functionality of the Access Control system of the Salto Systems in the Milestone VMS.

In this way, the control of both systems (Video Surveillance and Access Control) becomes possible through a single operational interface, Milestone Smart Client.

Efficiencies and functional gains are obtained (for example, associating cameras with ports and defining automatic rules), as opposed to the need to operate two systems separately.

It can be installed in large systems (with hundreds of units – cameras and doors) and also in small systems (with few units).

## Features

- Access to Salto Systems information (doors, door states, cardholders, events) through Milestone XProtect
- Issuing door commands (open, close) to Salto Systems via Milestone XProtect
- Reception of the Salto Systems event stream in Milestone XProtect Smart Client
- Association of registered cameras in Milestone to doors of the Salto Systems, through the Milestone Management interface
- Definition of automatic rules according to parameters (such as: event type, occurrence port, time lapse) and the action to be performed (closed door, problem notification, start capturing video from the associated camera)

## Specifications/ Requirements

- Windows 7 or higher, Windows Server 2010–2012 (64 bits)
- Salto Systems ProAccess SPACE software with active SHIP API
- Milestone XProtect VMS (Express/Professional/Expert /Corporate) + XProtect Smart Client + XProtect Access
- On the Milestone XProtect VMS machine, installed the MIP SDK 2016 R2 (or higher)
- The plugin requires the installation of two components:
  - “Plug-in” in the Milestone VMS machine
  - “Communication service” in the Salto Systems machine or on your own machine

- The Communication service is a WCF Service and its installation requires:
  - SQL Server 2012 or higher (can be the Express Version)
  - IIS 10.0
