

FaceMe®

SECURITY

Upgrade your security system  
with facial recognition

## What is FaceMe Security?

FaceMe Security is a software solution that brings facial recognition features to surveillance and access management, including identity recognition, health check, time & attendance, and event-based, real-time notifications. Built on FaceMe's industry-leading engine, it has an accuracy rate of up to 99.7%. It integrates into existing infrastructures, from IP cameras to complete video management systems (VMS).

### VMS Support for Real-time Notifications

## Flexible and Scalable

Residential  
Buildings

Hotels

Offices

Warehouses

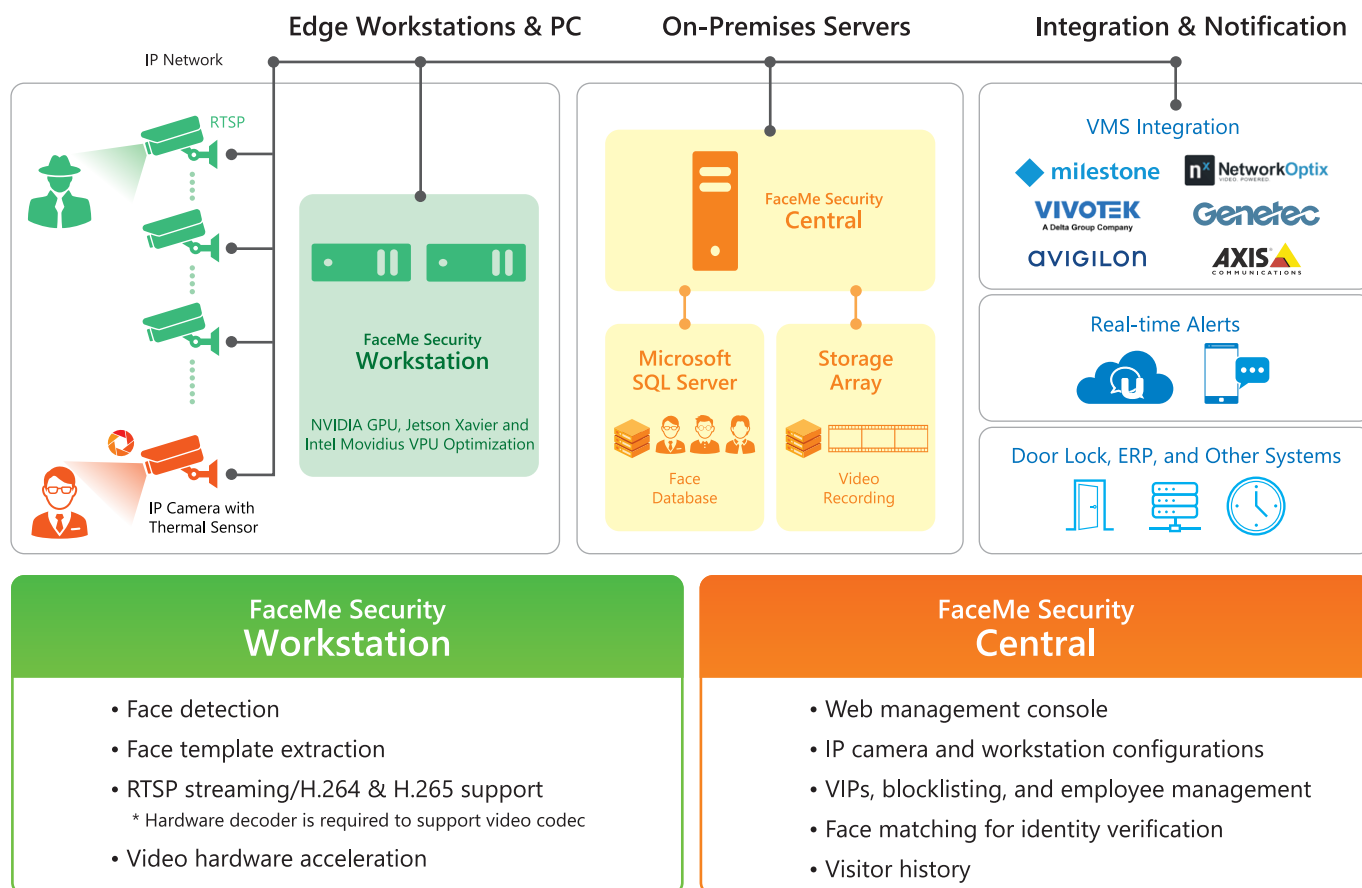

Factories

Public  
Transportation

## VMS Enhanced

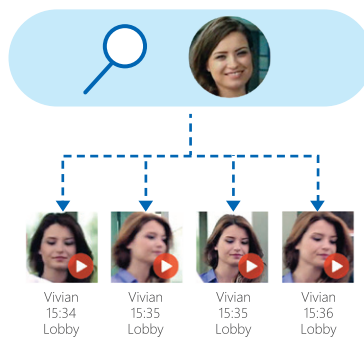

FaceMe® SECURITY + milestone

### No One Slip Out of Your Radar

FaceMe can automatically identify registered categories for any face it recognizes, and optionally send real-time notifications to selected personnel.

### Upload a Face to Find Out Their Past

To view a specific person's access records, recorded footage, or enrolled information - simply upload an image of them.

### Allows for Third-Party API Integration

We provide the resources you need for custom facial recognition solutions, giving you the flexibility to build our technology into your software.
