

Using Milestone XProtect with LucidLink

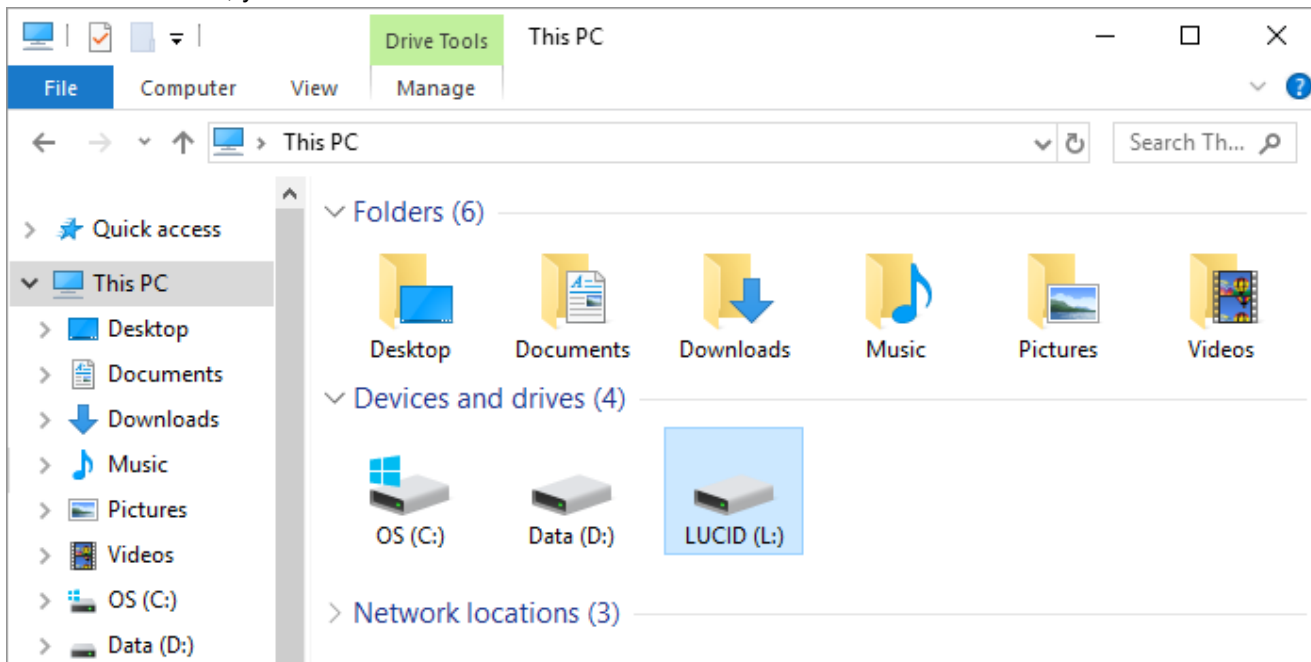

Modified on: Mon, 13 Jan, 2020 at 2:08 PM

LucidLink is certified for use with **Milestone XProtect** (<https://www.milestonesys.com/solutions/platform/video-management-software/>). XProtect cannot directly record and stream video data on-demand to and from object storage. LucidLink is a distributed streaming filesystem for object storage that allows true read and write access to object storage as if it were a local disk. LucidLink integrates with the host operating system as a file system mount point.

To use LucidLink with Milestone XProtect, if you don't already have a LucidLink Filespace, **you can create and initialize one** (<https://support.lucidlink.com/support/solutions/articles/31000053424-getting-started-with-lucidlink>). Your LucidLink Filespace is directly associated with an object storage bucket. This can be any S3-compatible object storage or Azure Blob.

Milestone XProtect runs on Windows, and to connect to your LucidLink Filespace you need to **download and install the LucidLink Client** (<https://www.lucidlink.com/download/>) on the same machine where it is running.

Once you connect to your LucidLink Filespace it will appear as a folder in Windows Explorer. To make this show up as a drive letter instead, you can run `lucid unmount` and `lucid mount <driveletter>:` from the command line.

You can then change the archive storage location to be the LucidLink drive in Milestone XProtect.

Properties

Storage configur

Stop the recording server if a recording storage is unavailable

Name	Device Usage	Default
Local default	55	<input checked="" type="checkbox"/>

Recording and archiving confi

Recording
1000 GB
c:\MediaDatabase

↓ Archive recordings older than 2 hour(s) at the next archive schedule

Archive
1000 GB
L:\MediaDatabase

↓ Delete when recordings are 7 day(s) old

Taskbar: In... Stora... Netw...

The LucidLink Filespaces distributed filesystem splits data and metadata layers, using a unique data layout with a specific block size. Review [LucidLink Filespaces - Cloud-Native File Service Architecture Overview](https://www.lucidlink.com/wp-content/uploads/ArchitecturalOverview_Sept_2019.pdf) (https://www.lucidlink.com/wp-content/uploads/ArchitecturalOverview_Sept_2019.pdf) for more details.

Note: This solution was tested in combination with Wasabi hot storage.
