

Skanska Malmö Live construction site

World leading €14,5 B construction company Skanska and the Danish architects Schmidt Hammer Kassen was appointed by the City of Malmö. The project objective: to combine meetings, congresses, concerts, and a hotel, all in on one site.

Completed, Malmö Live reaches an astounding height of 85 metres and is visible from all of Malmö, the Øresund Bridge and parts of Copenhagen. The project was Malmö's largest construction site.

Erik Abäck
Production Manager
Skanska

"It feels safe to know that Irisity's system sends an alarm directly if something is not as it should. It is also great to get rid of false alarms."

Challenges

- The site was approx. 10 000 sqm
- Complex and dynamic construction site
- High values with machines and assets
- Great potential losses during production stops

Solution

- 6 cameras covering critical areas and entrances
- Real time scaring intruders away before sending guards
- Connected to ARC
- Cameras used by guard on site during working hours to check incoming trucks and cars

Customer value

- 42 intrusions were detected and interrupted
- Full surveillance on large areas with few cameras
- Zero production stops and thefts
- Fast ROI

Safety

Erik Abäck, Production Manager at Malmö Live: "This high profile project needs to be protected because it is the largest building project in Malmö, with over 500 workers in the city centre. We want to make sure that only our people is within the premises."

He further explains: "There is a lot of valuable building material that need protection and the site is changing all the time – this puts a lot of pressure on the system."

Erik also appreciate that the system detects unwanted activity live and an operator can rapidly proceed with the most suitable measure.

Professionality

Erik describes the collaboration: "I appreciate the good cooperation with Irisity and quality is crucial in all that we do. That is why testimonials from earlier projects are important for us. It really shows that Irisity cares."

Economy

Erik says: "Construction guard saves us money through measures taken when the intrusion has barely started and before the damage is done. We do not need to spend costly hours with investigations and stoppages, and we dramatically lower the cost compared to guards on patrol."

"Irisity makes it possible to take action before the intrusion starts – much more effective than patrolling guards!"

Erik Abäck, Skanska

About Irisity

Irisity provides Intelligent Camera Technology Software that partner offers end users as a service.

The system has a scalable and cloud-based infrastructure, enabling international distribution of alarms, market-leading response times, centralized administration as well as collection and distribution of event reports and statistics.

The solution secures large outdoor areas using intelligent video surveillance. Customers get peace of mind round-the-clock, as well as a solution that goes from detection in real time to measure-taking and reporting.

Our business idea is to improve the security with cost-efficient intelligent video surveillance. We accomplish this by delivering an end-to-end solution that greatly reduces intrusions and vandalism.
