TRBOserver: Milestone Integration

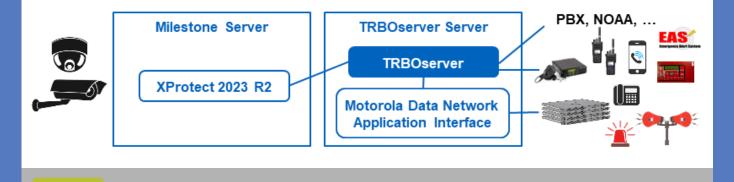

Enhancing notifications capabilities

•

TRBOserver is an on-premise multi-site server that enables Milestone XProtect systems with practically limitless bi-directional alarm and notifications capabilities. It notifies different types of users and devices, including analog and digital 2-way radios, telephones, PA systems, and IoT devices.

Features	 Examples of what the TRBOserver-Milestone integration can accomplish: Simultaneously dispatch voice announcements to any analog or DMR digital 2-way radios, telephones, PAs, and text messages to groups or individual DMR radios Acknowledge or trigger alarms from Motorola MOTOTRBO radios Trigger alarms via telephone with a simple code Alarms activate relays via radio telemetry Receive notifications on XProtect clients, including faulty machinery, fire, NOAA severe weather reports, and emergency alerts Direct alarms to the most appropriate destination with time- and content-specific rules
Benefits	 TRBOserver: Integrates the capabilities of multiple systems into one single solution to enable simpler, robust, and reliable deployments. Delivers additional radio-centric capabilities such as emergency / mandown / loneworker alerts, telephone interconnect, indoor/outdoor location, job ticketing, employee accountability and safety, as well as alarms from fire panels, HVAC, BDAs, and malfunctioning equipment Future-proofs the ever-changing requirements of any organization Direct network integration with Motorola MOTOTRBO infrastructure and any type of DMR 2-way radios.
Value Propositions	TRBOserver automates the distribution of notifications and brings them in the most efficient way to the appropriate parties at the time.
	The end goal is to more efficiently act on events, improving situational awareness, employee safety, and loss prevention, while reaching any part of an organization.
