# Logistics surveillance solutions

## Supply chain IP tracking and monitoring systems

XProtect® Professional\* | XProtect® add-on products | Milestone partner solutions

- > Loss prevention
- > Remote monitoring
- > Analog-to-IP conversion
- > Audit trail
- > Fraud prevention
- > Liability for damages
- > Perimeter protection

### Track freight from start to finish

Knowing where your packages are at every point throughout the supply chain can reduce liability claims, transform how business is done and directly affect the bottom line. Milestone open platform technology also allows for monitoring and documenting the status of incoming and outgoing goods, ensuring quality processing throughout the supply chain.

### Identify vehicle flow at any facility

XProtect® LPR is an add-on product that allows facility managers to identify each vehicle entering and exiting any facility at any point in time from one central surveillance hub.

### Know where to dedicate resources

XProtect Professional makes it possible for users to arrange cameras to effectively identify problems in the supply chain as they arise. The software makes it easy to properly assess a particular situation and apply the right resources from afar.

### Keep an airtight perimeter at all locations

Complete with built-in motion detection, XProtect Professional provides users with three viewing clients, so users can investigate suspicious activity and monitor any facility at any time via computer, tablet or mobile device.

\*XProtect Professional is a recommended product solution. The complete Milestone XProtect VMS suite of products can be applied to meet unique solution requirements.

# Upgrade the supply chain

IP technology makes the difference

## Milestone XProtect Professional software

XProtect Professional offers a complete visual overview of your surveillance installation with interactive maps revealing camera locations. Alarms displayed directly in the maps make it easy to quickly identify and address incidents, while video export offers easy, secure delivery of still images and video files for investigations as well as transparency for customers.

## Milestone products and services deliver extra value

Milestone Interconnect™ provides the ideal solution for centrally managing a surveillance system across geographically dispersed sites, eliminating the need for added personnel.

Meanwhile, the Milestone Customer Dashboard ensures that resellers can monitor your system's health around the clock, throughout the year.

## Milestone partner solutions

Having access to the latest surveillance and security technologies helps site developers future-proof and protect their installation investment. Our third-party partner solutions can help on-site managers link shipment and bar codes, record video from outbound vehicles and export sequences as a single merged file, giving a more complete representation of events.

## Customer story

### Protecting 40 percent of all UK pharmaceuticals

Using Milestone XProtect, British logistics company Movianto established a security system capable of tracking all vehicles at every entry point, including those moving around the site, as well as all loading bays and rear fire exits, which were seen as key areas of vulnerability. Area	Concern	Solution
Loss prevention	Securing goods handling throughout the facility	Quickly search video using bar code data and receive visual confirmation of all handling of a particular shipment
Analog-to-IP conversion	Cost of replacing all existing security equipment at once	The Milestone open platform and encoder licensing make it cost-effective to gradually migrate to an IP-based solution and later scale the system to a centralized location
Fraud prevention	Quality control for third-party logistics providers	Use video to verify exact quantities packed in each shipment. Quickly find relevant video by integrating with other business systems such as enterprise resource planning (ERP) or warehouse management system (WMS)
Perimeter protection	Ensure controlled access to any area all hours of the day	Centralized monitoring gives administrators the tools to monitor more areas with greater efficiency. The combination of video analytics and thermal cameras provides better accuracy and fewer false alarms
Liability for damages	Damage to goods and buildings leading to disputes	Warehouse workers equipped with company-issued mobile phones can document damaged incoming goods. Video surveillance with high-definition cameras can document and identify vehicles responsible for damage
Audit trail	Complying with security standards and investigating incidents	Strategically placed cameras and XProtect LPR provide a complete record of all vehicles entering and leaving a facility. IP technology delivers substantially higher video resolution, making it possible to precisely identify individuals involved in events
Remote monitoring	Desire to eliminate manned guards particularly during off-hours	Network video makes it possible to centralize or outsource video surveillance

Milestone Systems is the global leader in open platform IP video management software. Milestone software is sold through authorized and certified partners worldwide.
