EMBEDDED VIDEO SURVEILLANCE PLATFORM

Milestone Arcus™ is a video surveillance platform designed to be embedded in hardware devices, enabling technology partners to deliver customized, co-branded, market-ready surveillance solutions.

# ARCUS

EMBEDDED VIDEO SURVEILLANCE PLATFORM

Milestone pre-configures and embeds the surveillance platform into hardware devices running Linux, Mac OS X® or Microsoft® Windows® operating systems to quickly deliver combined solutions to a market that increasingly demands low-complexity surveillance solutions.

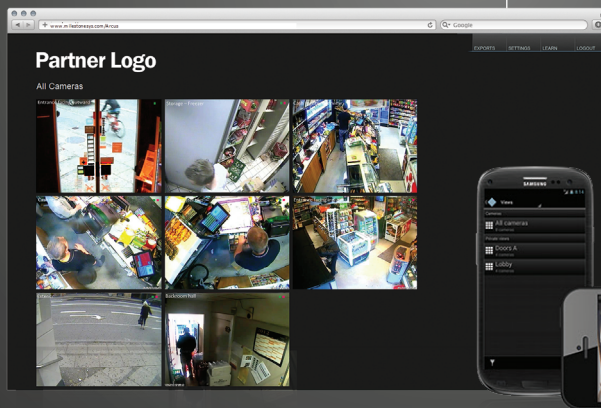

Hardware technology partners can leverage Milestone's expertise and brand to expand their product range with a co-branded solution at low risk and low cost.

This enables the partners to focus on their core business whilst expanding their product offering with a new, combined best-of-breed video surveillance platform.

## Easy to install

The initial deployment is completed within minutes after connecting devices.

Robust, requiring little or no maintenance, the future-proof solution automatically rolls out updates. In the instance of system failures, the solution sends alarm notifications.

## Easy to use

The intuitive, all-in-one user interface allows users to log in to operate their surveillance solution from any web browser. Users can view live video, search and export video evidence.

Milestone Mobile, an application for smartphones and tablets, offers convenience and greater awareness when on-the-go.
